DOKU · FlexiBill

MALAYSIA · MYR | INDONESIA · IDR

POINT OF VIEW · FLEXIBILL BILLING RECURRING

One redirect. Every cycle collected.

Your interface keeps the customer. DOKU Checkout becomes the entry point. FlexiBill Billing Recurring runs every cycle after that — in MYR for Malaysia and IDR for Indonesia.

THE ROUTE

Six chapters from the chase to the checkout

01

Why collection breaks

The monthly chase and the five places revenue leaks.

02

The point of view

Your interface in front, DOKU Checkout as the door.

03

How it works

One API call, two switches, three calendars.

04

Build your way

API-only or hybrid, with the full toolkit.

05

Malaysia use cases

Six stories in MYR, extreme cases included.

06

Why sign now

Proof points, go-live steps and the next move.

WHAT YOU WILL LEAVE WITH

A point of view

Your interface in front, DOKU Checkout as the entry point, FlexiBill behind.

A tutorial

Every switch, calendar and API explained with MYR and IDR examples.

Six Malaysian stories

Background, extreme cases, the build and what changes.

01 Why collection breaks
02 The point of view
03 How it works
04 Build your way
05 Malaysia use cases
06 Why sign now

CHAPTER 01

01

Why collection breaks

Before the point of view, the problem: a monthly chase that quietly drains revenue, hours and goodwill.

01 · THE MONTHLY CHASE

Every month starts with the same chase

Day 1
Fee reminders go out, one chat at a time

Day 3
The first transfers arrive as screenshots

Day 7
Admin matches payments to names by hand

Day 10
Second reminders to the same families

Day 15
Awkward follow-ups at the counter

Day 25
A few still unpaid as next month begins

THE REAL COST

Collection has become a part-time job nobody was hired for — repeated twelve times a year.

Recurring revenue leaks at five points

THE QUIET ONE

~14%

card-lifecycle failures: expired, replaced or blocked cards that stop a recurring charge without anyone noticing.

FlexiBill answers it with retry dates and a self-service card refresh link.

Forgotten payments
Manual payers forget, so every month restarts the chase.

Proof-of-transfer reconciliation
Screenshots and statements matched to names by hand.

Card lifecycle
Expired or replaced cards stop charges without warning.

Silent churn
Customers drift away without ever formally cancelling.

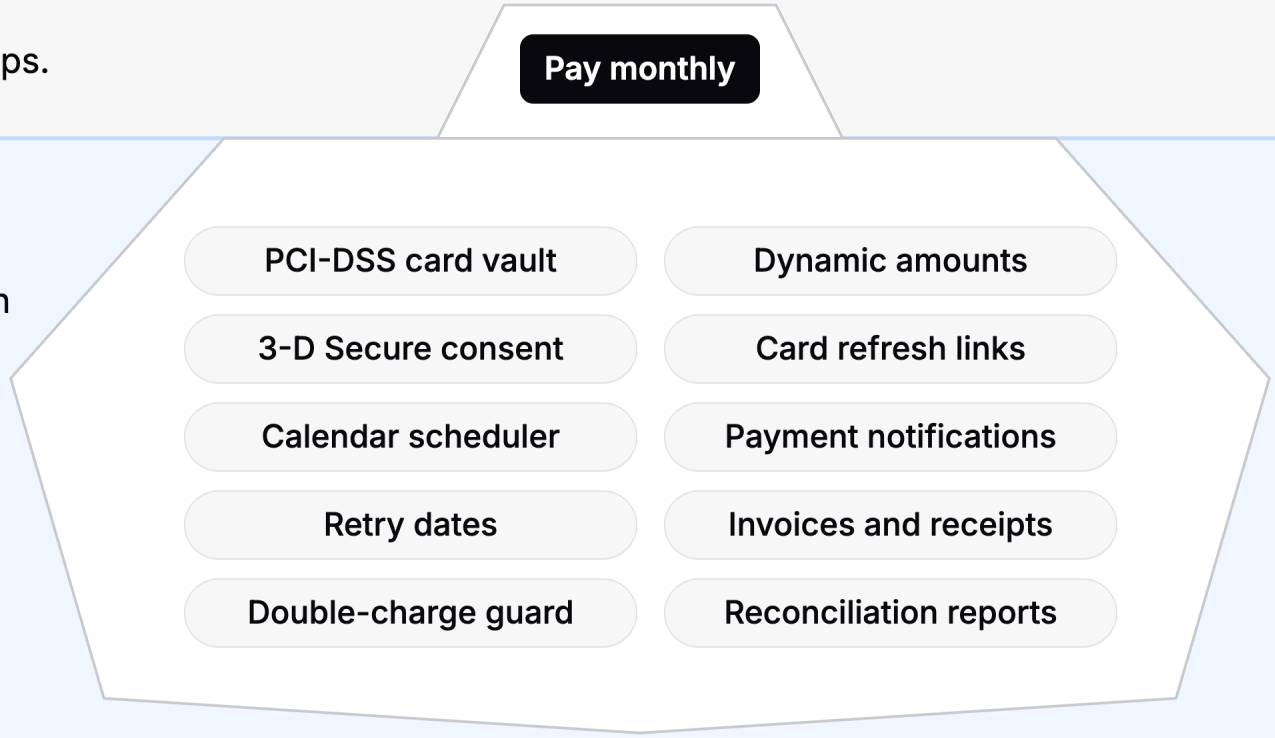

Staff hours
The same people chase instead of teaching, coaching or serving.

01 · BUILD OR BORROW

A simple Pay button hides a billing engine

ABOVE THE WATER

One button your customer taps.

BELOW THE WATER

Everything that must work on every cycle, for years.

BUILD IT

A scheduler, a card vault, retries and a compliance programme to maintain.

BORROW IT

One API call and a DOKU Checkout link.

CHAPTER 02 · THE POINT OF VIEW

Keep your front door. Borrow our engine room.

Your app, portal or platform stays the customer’s home. DOKU Checkout is the one secure door where consent and the first payment happen. FlexiBill runs every cycle after that.

02 · THE DIVISION OF WORK

Three layers, one clear division of work

LAYER 1 · YOU OWN IT

Your interface

App, website, parent portal, member app or platform. It owns the relationship, the plans on show and the sign-up experience.

`your UI`

↓ `redirect to paymentLink`

LAYER 2 · THE ENTRY POINT

DOKU Checkout

Takes the first payment or a voided card check (MYR 2 · Rp10.000), captures consent and tokenises the card in a PCI-DSS vault.

`checkout`

↓ `token + schedule`

LAYER 3 · DOKU RUNS IT

FlexiBill Recurring engine

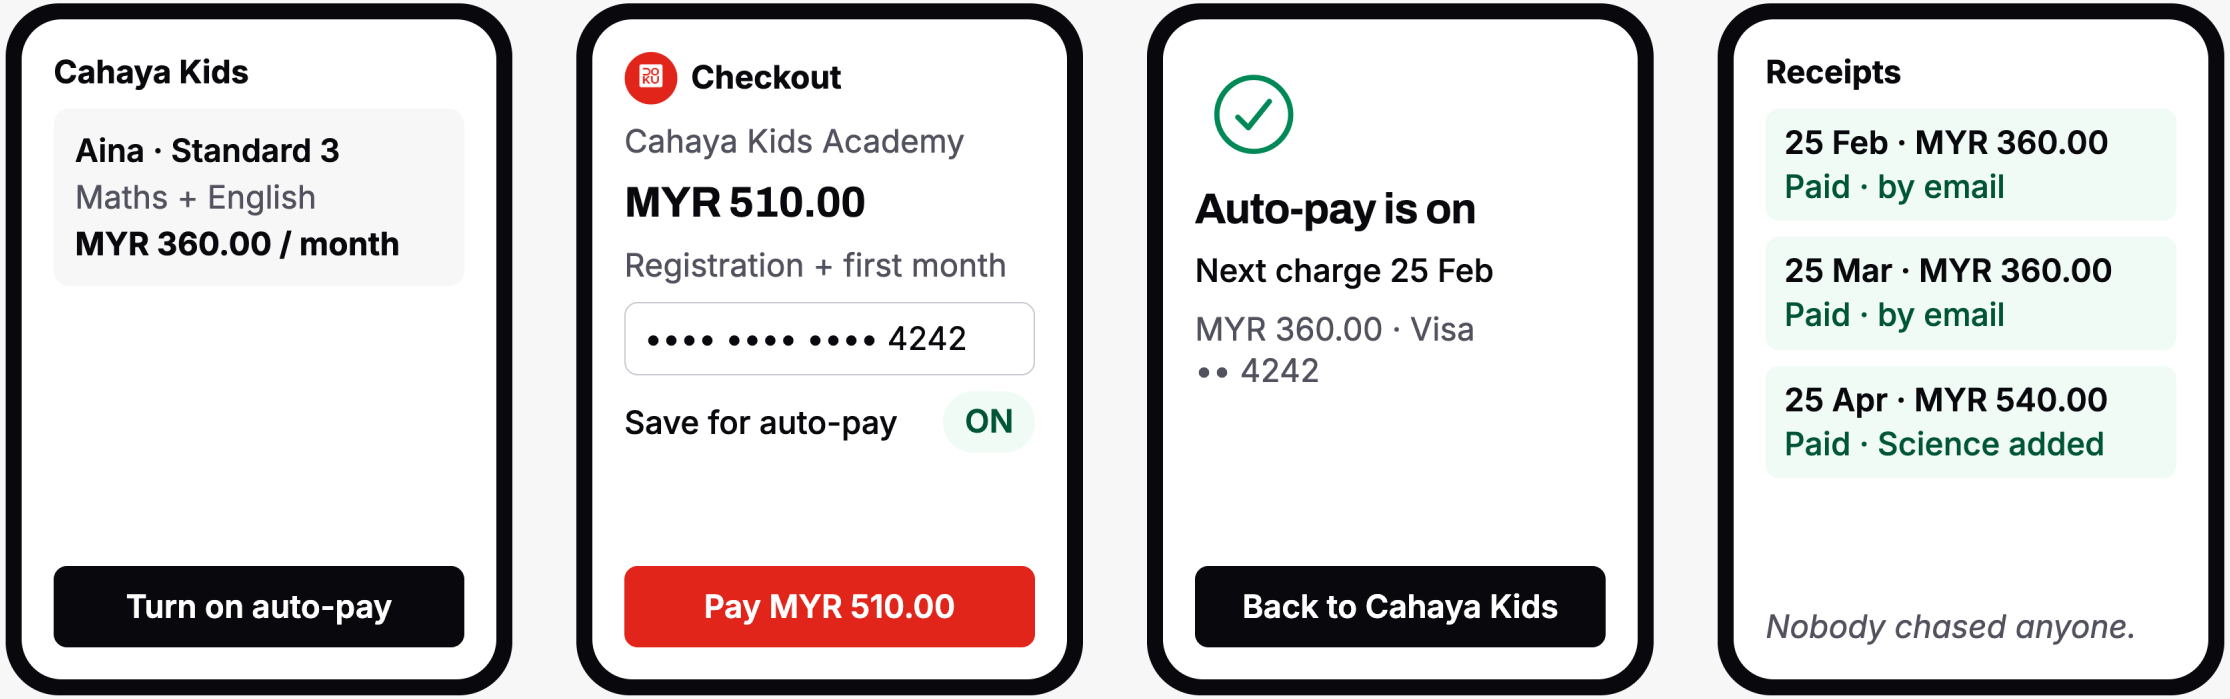

Calendar scheduler, retry dates, dynamic amounts, notifications and the Account Billing console your team works from.

`engine`

Funds settle to your account, and every registration and charge stays reportable in Register Report.

02 · THE CUSTOMER'S VIEW

Your customer taps once, then never again

The parent taps a button you designed, in your brand.

Pays cycle one and saves the card; card data stays with DOKU.

Auto-redirect returns them to your success page.

Charges run on schedule; the amount can follow your ledger.

01 Why collection breaks
02 The point of view
03 How it works
04 Build your way
05 Malaysia use cases
06 Why sign now

CHAPTER 03

03

How it works

One API call registers the customer. Two switches decide the money. Three calendar types decide the dates. Recovery and operations come built in.

03 · ONE API CALL

One call registers the customer and the schedule

REQUEST · ESSENTIAL FIELDS, MYR EXAMPLE

```
POST /ab-core-api/v1/billing-registration
{ "order": { "amount": 510.00, "currency": "MYR",
    "invoiceNumber": "CKA-2027-0142",
    "additionalData": {"billInvoiceNumber": "CKA-0142"}},
  "payment": { "paymentDueDate": 1440,
    "useOrderAmount": true },
  "customer": { "id": "PAR-2231", "name": "Nurul",
    "phone": "60123456789", "email": "nurul@mail.my" },
  "recurring": { "billNumber": "CKA-0142",
    "startDate": "2027-02-25T00:00:00Z",
    "endDate": "2027-11-30T00:00:00Z",
    "executeType": "DATE", "executeDate": "25,26,27",
    "executeMonth": "JAN,FEB,MAR,…,NOV",
    "flatStatus": false },
  "url": { "autoredirectPage": true, … } }
```

RESPONSE

```
200 OK
{ "code": "success",
  "paymentLink": "…/checkout-link-v2/da91…" }
```

Store only the billNumber

DOKU keeps the card token in its PCI-DSS vault.

Send the link anywhere

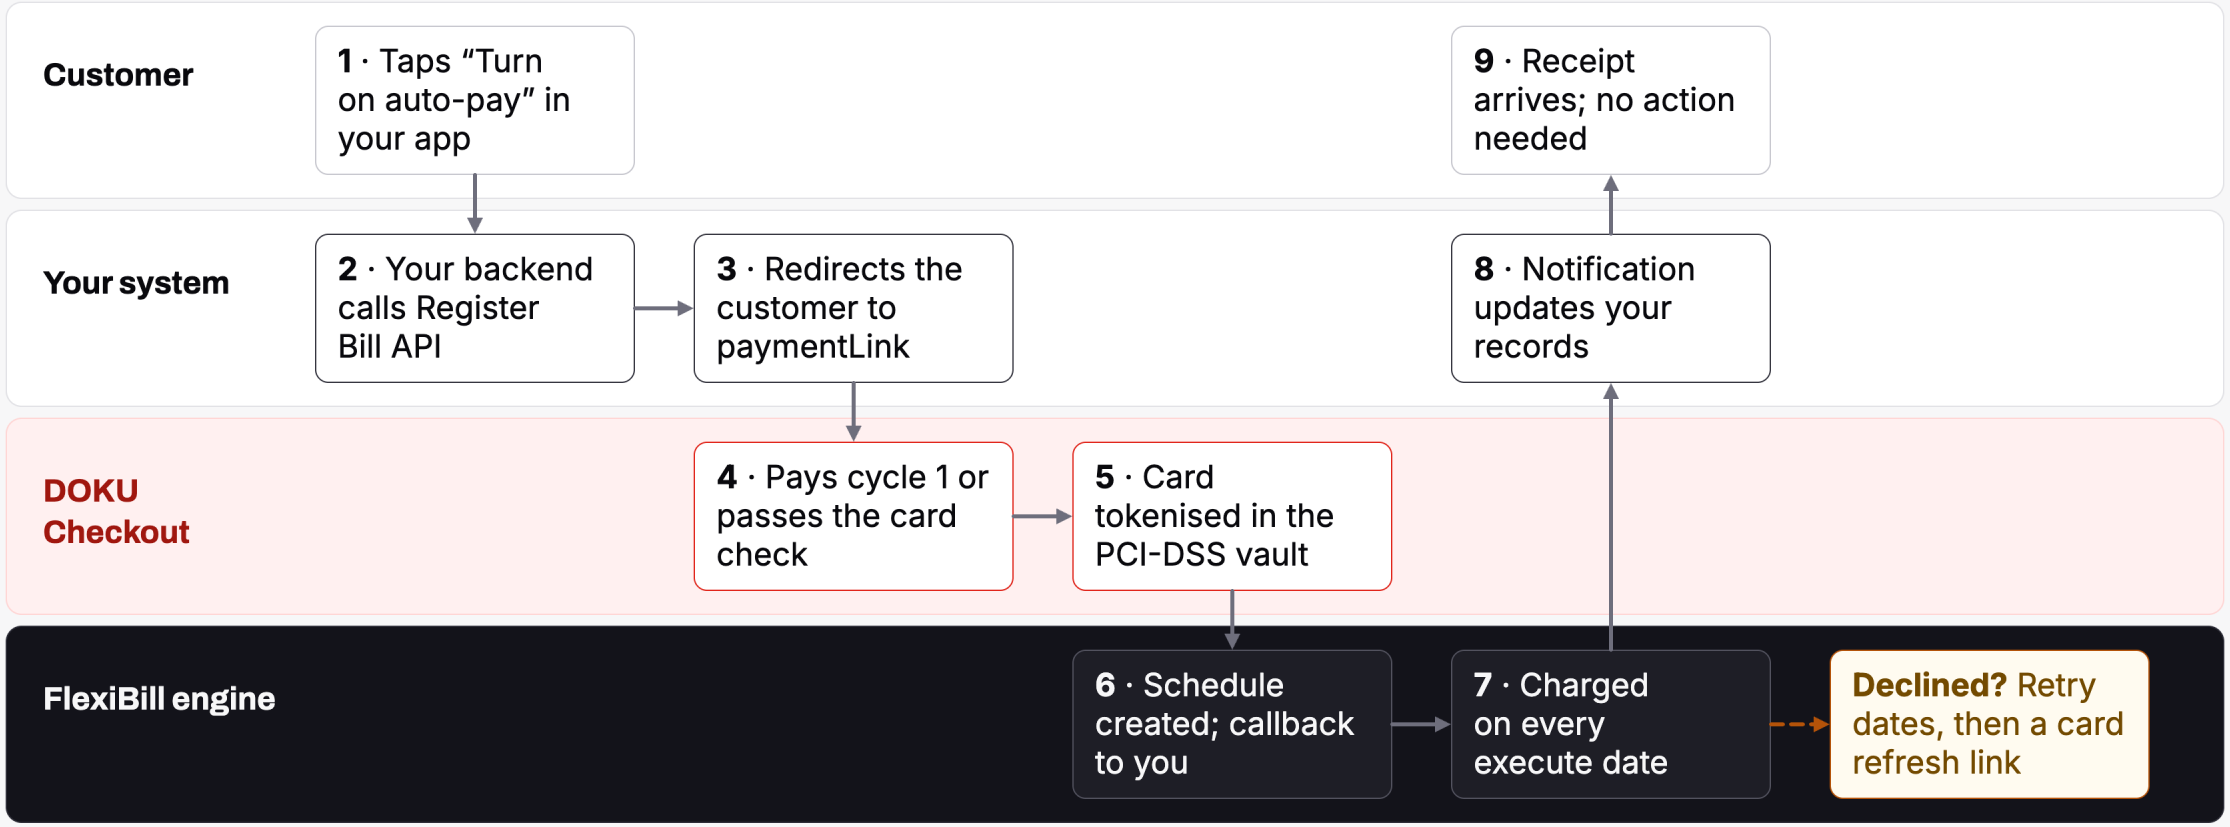

In-app redirect, email or chat — it opens DOKU Checkout.

Hear about everything

A registration callback, then a notification on every charge.

03 · UNDER THE HOOD

What happens between the call and every charge

03 · TWO SWITCHES

Two switches give you four billing recipes

If the first payment differs from the rest, fetch amounts from your system.

	`flatStatus: true` The same amount every cycle	`flatStatus: false` Each amount fetched from your system
`useOrderAmount true` Collect cycle 1 at checkout	**A Pay now, same every cycle** Cycle 1 is paid at checkout; every cycle repeats order.amount. A2 memberships	**B Pay now, amount varies** Cycle 1 can bundle a registration fee; later cycles follow your ledger. A1 B1 B3 B4
`useOrderAmount false` Verify the card now, charge later	**C Verify now, fixed later** A voided MYR 2 or Rp10.000 check saves the card until startDate. A2 term enrolment	**D Verify now, ledger decides** The card is saved today; each quarter's amount comes from your ledger. B2 strata

03 · THREE CALENDARS

Three ways to write the billing calendar

`executeType: DATE`

Monthly, on chosen dates

J F M A M J J A S O N D

```
executeDate "25,26,27"
executeMonth "JAN,…,NOV"
```

Best for: Tuition and tadika: December is skipped.

`executeType: DAY`

Weekly, on chosen days

M T W T F S S

```
executeDate "SAT"
(no month list needed)
```

Best for: Swim lessons and weekend class packs.

`executeType: FULLDATE`

Exact calendar dates

05 Jan · 04 May · 07 Sep

```
executeDate
"20270105,20270504,20270907"
```

Best for: Term instalments and arrears plans.

Retries are just extra dates. “25,26,27” charges on the 25th and retries on the 26th and 27th. Turn on **Send One Bill/Month** so a successful retry is never followed by a second charge.

03 · DYNAMIC AMOUNTS

Variable amounts come from your ledger

FLEXIBILL ENGINE
Execute date arrives: 25 Mar

→

DOKU ASKS
GET your URL Amount with bill_number and customer_id

→

YOUR LEDGER
Returns this cycle's billing_amount

→

CHARGED
MYR 540.00 on the saved card, receipt sent

BEFORE EACH CHARGE

```
GET {URL Amount}?bill_number=CKA-0142
    &customer_id=PAR-2231

200 OK
{ "billing_amount": 540.00 }
```

Add-ons and new subjects

Mid-month proration

Arrears and late-payment interest

Sibling and scholarship discounts

⚠ Set **flatStatus false** only once your URL Amount endpoint is live — with no endpoint, that cycle's charge fails. Configure it in Settings → Account Billing → Bill Detail Setting.

03 · RECOVERY

Failed charges recover without a phone call

INSUFFICIENT FUNDS
Salary not in yet

25th
Declined → **26th**
Retry succeeds → **27th**
Skipped by Send One Bill/Month

EXPIRED CARD
Card replaced by the bank

25th
Declined: card expired → **Same day**
Update Source of Fund link by email → **Customer**
Saves a new card on DOKU Checkout → **Your team**
Confirm Payment collects it

84%
unique-bill success rate · Malaysia

65%
recovery rate on failed charges · Indonesia

~14%
card-lifecycle failures, met with refresh links

03 · NO-CODE OPERATIONS

Your team runs recurring billing without code

Account Billing › **Manage Recurring**

Search bill number

Bill number	Customer	Amount	Schedule	Status
CKA-0142	Nurul Huda	MYR 360.00	25 · Jan–Nov	Active
CKA-0187	Tan Wei Ming	MYR 540.00	25 · Jan–Nov	Retrying
ASH-2210	Arjun Nair	MYR 159.00	01 · monthly	Paused
SH-KL-1207	Siti Aminah	MYR 1,089.00	01 · quarterly	Active
PF-WXY1234	Lim Kah Hoe	MYR 190.80	01 · monthly	Refresh sent

Confirm Payment | **Update Source of Fund** | **Inactivate Bill**

Edit Execute Schedule | **Register Report**

Confirm Payment
Re-run this cycle's charge today.

Update Source of Fund
Send a DOKU-hosted card replacement link.

Inactivate / Activate Bill
Pause and resume one bill: a freeze.

Edit Execute Schedule
Change dates or months on API bills.

Register Report
An audit trail of every registration.

01 Why collection breaks
02 The point of view
03 How it works
04 Build your way
05 Malaysia use cases
06 Why sign now

CHAPTER 04

04

Build your way

API-only or hybrid. Every API and webhook, the no-code Pricing Table, and how Malaysia and Indonesia differ.

04 · TWO WAYS TO BUILD

Two ways to build: API-only or hybrid

Both open DOKU Checkout as the entry point, and both are run from the same console.

API-ONLY platforms and apps

Your UI, your logic, DOKU's rails.

YOU BUILD

A sign-up button, one Register Bill call, a URL Amount endpoint and notification handlers.

DOKU RUNS

DOKU Checkout, the card vault, the scheduler, retries, refresh links and the Account Billing console.

BEST FOR

Platforms and merchants that already have their own app and ledger.

Register Bill | URL Amount | URL Notification

HYBRID direct merchants

Your UI in front, no-code behind.

YOU BUILD

The same API entry from your app — or nothing at all, because plans live in the dashboard.

FLEXIBILL ADDS

Collections, Plans, Coupons and Tax; a Pricing Table; one-off bills by email; webhooks.

BEST FOR

Direct merchants with walk-ins, promotions and one-off fees.

Pricing Table | Create Subscription | Generate Bill

04 · THE TOOLKIT

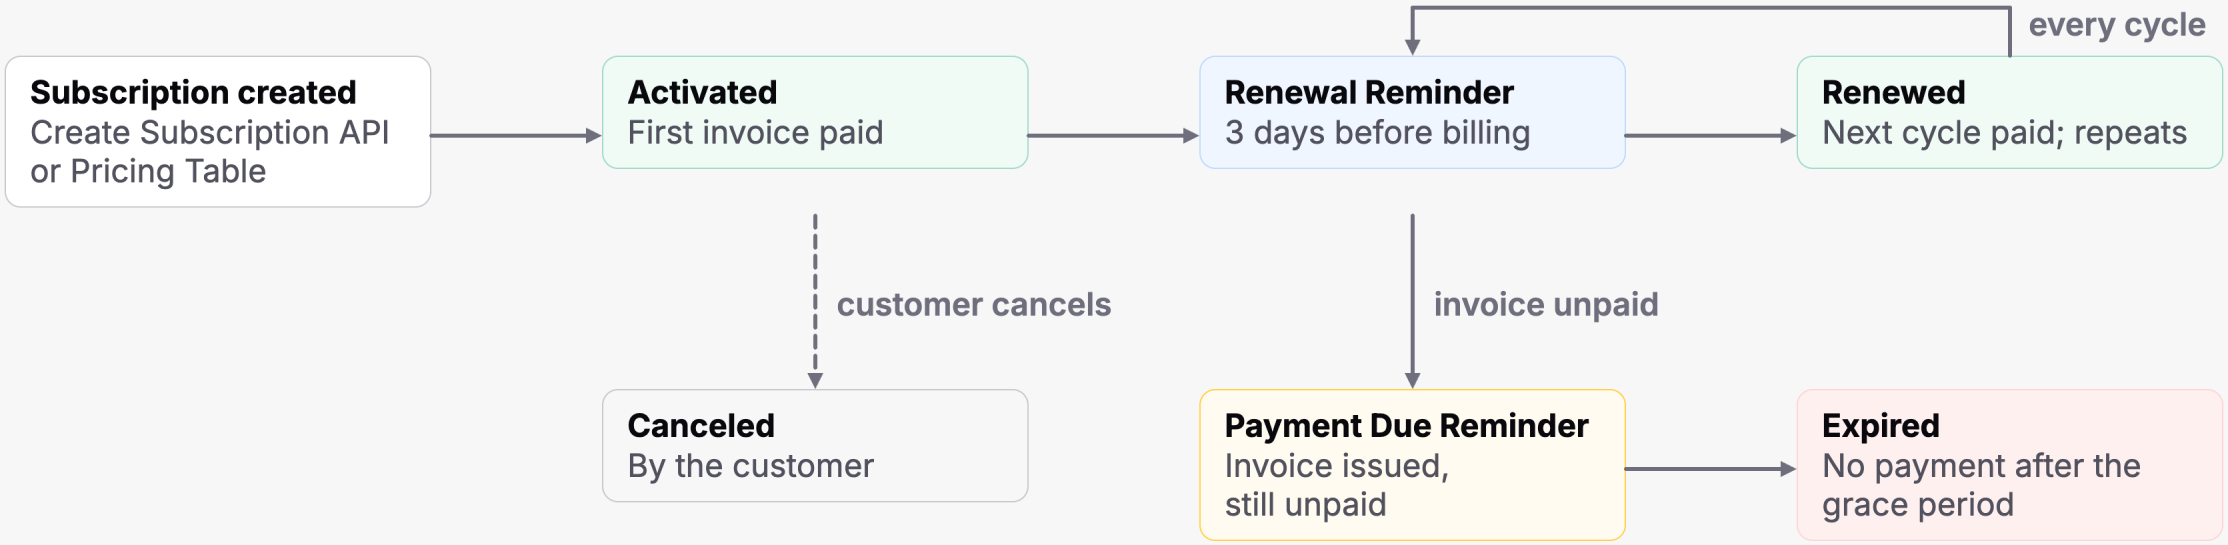

Every FlexiBill API in one view

API	What it does	Endpoint	Market
Register Bill · Recurring V2	Registers the customer and schedule; returns the DOKU Checkout link	POST /ab-core-api/v1/billing-registration	MY · ID
Authentication	Client-Id, Request-Id, Request-Timestamp and an HMAC-SHA256 Signature on every call	Request headers	MY · ID
Create Subscription	Subscribes a customer to a Collection and Plan built in the dashboard	POST /subscription-core/v1/subscription	MY · ID
Generate Bill	One-time or recurring invoice with a payment link, by email (plus WhatsApp in Indonesia)	POST /bill-collection-core/v1/generate/invoice	MY · ID
PayChat Send Message	Sends a WhatsApp message that carries a payment link	PayChat API	ID

</> Paths are relative to DOKU's sandbox and production hosts. Webhooks for every lifecycle event follow on the next slide.

04 · WEBHOOKS

Webhooks keep your app in step

API-REGISTERED BILLS · ACCOUNT BILLING

- `Registration` to your New Recurring Alert URL
- `Payment Execution` to your URL Notification

PAYCHAT ORDERS · INDONESIA

- `Accept Order` Inquiry webhook
- `Accept Order` Success Callback webhook

04 · NO-CODE PRICING TABLE

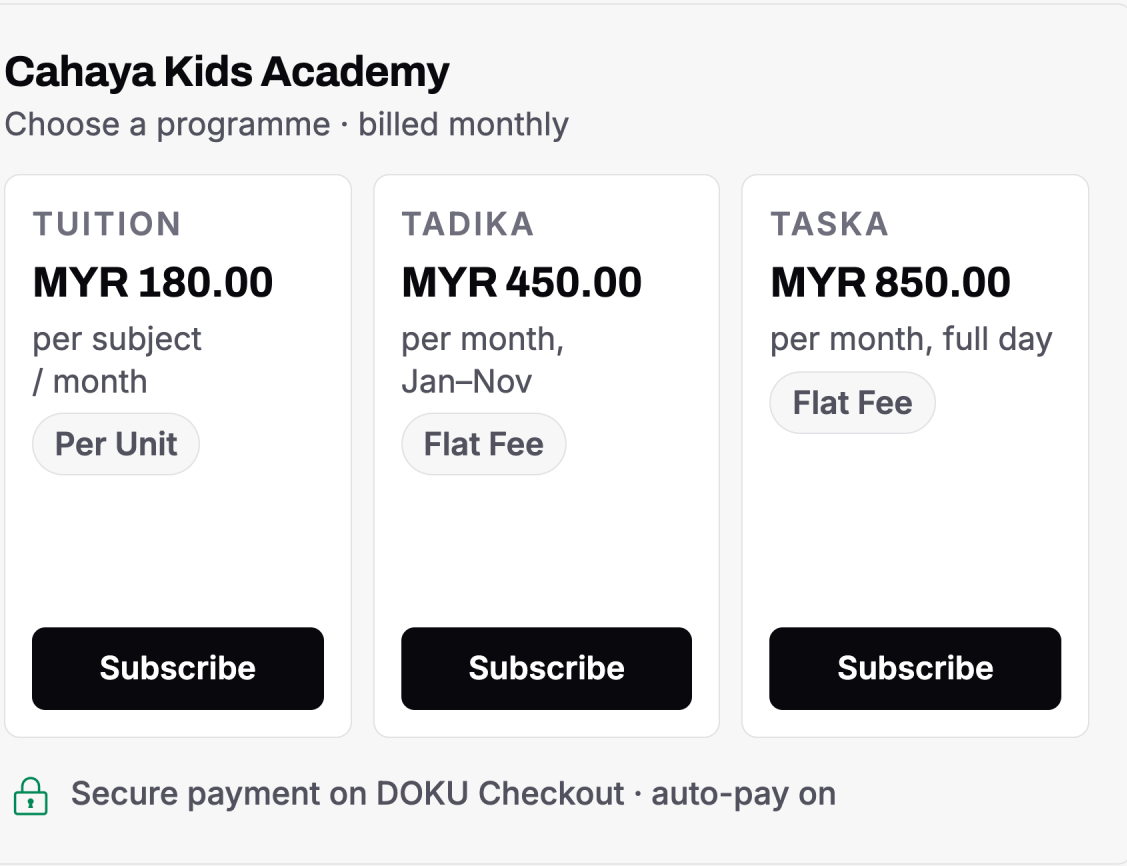

A pricing table is four tabs and a link

1. **Collection**
   Name the service; add Tax such as SST.
2. **Plan**
   Pick a pricing model; price it in MYR.
3. **Appearance**
   Add your logo, colours and plan order.
4. **Additional Details**
   Ask for a child's name, unit or car plate.

Publish, then share the link or embed it. Subscribers land on DOKU Checkout with auto-pay.

SIX PRICING MODELS

Flat Fee · Per Unit · Tiered · Volume · Stairstep · Open Amount

04 · TWO MARKETS

Two markets, one pattern, local details

	Malaysia · MYR	Indonesia · IDR
Currency	MYR with two decimals; subscription totals from MYR 2.00	IDR in whole rupiah
Card check at checkout	MYR 2 authorisation, voided immediately	Rp10.000 authorisation, voided immediately
Invoices and receipts	Email	Email, plus WhatsApp through PayChat
Tax on plans	SST set once per collection where the service is taxable	Tax set once per collection
Recurring credentials	Cards saved on DOKU Checkout	Cards saved on DOKU Checkout; direct-debit and e-money tokens for batch billing
Scheduling	DOKU Hosted Scheduler	DOKU Hosted Scheduler, or your own with Batch Upload Token
Customer entry points	Your interface or the Pricing Table	Your interface, Pricing Table, Billing Portal, Group Apps or PayChat

04 · INDONESIA · MERCHANT-HOSTED SCHEDULER

Indonesia: your scheduler, DOKU's batch rails

INDONESIA ONLY · IDR

1 · FIRST PAYMENT
On DOKU Checkout: card, direct debit or e-money

→

2 · GET TOKEN
Your system pulls each token by API

→

3 · BUILD FILE
TKN batch: bill number, IDR amount, token

→

4 · ENCRYPT
AES-256 file, RSA-wrapped key, SFTP upload

→

5 · PROCESS
On your notify call or DOKU's scheduler

→

6 · REPORT
Result file plus a notification to you

PROOF POINT

50,000

rows in a single batch file

Encrypted end to end

Each file is AES-256 encrypted with an RSA-wrapped key and moves over SFTP, with a report returned for every row.

The trap to avoid

After a customer updates their card, pull the new token before you build the next file.

01 Why collection breaks
02 The point of view

04 Build your way
05 Malaysia use cases
06 Why sign now

CHAPTER 05

05

Malaysia use cases

Six stories in MYR: two direct-merchant segments and four platforms, each with extreme cases, the build and what changes.

05 · THE MALAYSIA MAP

Two segments, six stories, one entry point

SEGMENT A · DIRECT MERCHANTS

High volume, fixed monthly fees, painful collection

A1 Tuition and enrichment centres, private kindergartens and taska

HYBRID · Recipe B

A2 Gyms, martial arts, dance and swim schools

HYBRID · Recipes A and C

SEGMENT B · PLATFORMS

Platform-led: one integration unlocks many merchants

B1 School and tuition management systems

API-ONLY · Recipe B

B2 Property management software for JMB/MC fees

API-ONLY · Recipe D

B3 Season parking and access platforms

API-ONLY · Recipe B · RECOMMENDED

B4 Co-living and student housing platforms

API-ONLY · Recipe B · RECOMMENDED

A

SEGMENT A · DIRECT MERCHANTS

High volume, fixed monthly fees, painful collection

High volume
Hundreds of families or members at every site.

Fixed fees
The same amount, month after month.

Painful collection
Chasing by chat, reconciling by hand.

STORIES A1 · Tuition, tadika and taska | A2 · Gyms, martial arts, dance and swim

05 · A1 · TUITION, TADIKA AND TASKA

Three fee types, 520 payments every month

HYBRID | RECIPE B · PAY NOW, AMOUNT VARIES | SEGMENT A · DIRECT MERCHANT

HOW THEY COLLECT TODAY

1. Fee reminders go out by WhatsApp on the 1st of every month
2. Parents pay by online transfer, DuitNow QR or cash at the counter
3. Proof of payment arrives as screenshots in a dozen chats
4. Admin ticks a spreadsheet, then chases the rest by the 10th

⚠ **Collection eats the first two weeks of every month.**

CAHAYA KIDS ACADEMY · SHAH ALAM · ILLUSTRATIVE

Tuition, per subject	**MYR 180.00 / month**
Tadika, January to November	**MYR 450.00 / month**
Taska, full day	**MYR 850.00 / month**
Registration, once	**MYR 150.00**

MYR 155,400

billed every month across 520 enrolments

No SST line: fees sit below the education SST threshold.

Six extreme cases a tuition office knows well

01 Three children, three programmes

One parent, three bills: each child keeps its own amount and calendar.

`billNumber per child`

02 Registration fee in the first checkout

Cycle 1 collects MYR 510.00; later cycles fetch MYR 360.00 from you.

`flatStatus: false`

03 Tadika has no December

The calendar runs January to November; December is simply skipped.

`executeMonth "JAN,…,NOV"`

04 Parents paid on the 25th

Charge on payday, retry on the next two days, never twice.

`executeDate "25,26,27"`

05 Joins in the middle of March

Cycle 1 collects a prorated amount; full fees follow from your ledger.

`order.amount + URL Amount`

06 Out for a term, then back

Pause the bill and resume it later, with no re-registration.

`Inactivate / Activate Bill`

Hybrid build: walk-ins and app, one checkout

TWO ENTRIES
App via API; walk-ins via Pricing Table

→

DOKU CHECKOUT
Pays MYR 510.00 and saves the card for auto-pay

→

SCHEDULER
Charges on the 25th, retries 26th and 27th, Jan–Nov

→

YOUR LEDGER
URL Amount returns each child's fees this month

→

RECEIPTS
Email receipt; status in Manage Recurring

REGISTER BILL · KEY FIELDS

```
"order": { "amount": 510.00, "currency": "MYR" },
"payment": { "useOrderAmount": true },
"recurring": { "billNumber": "CKA-0142-AINA",
  "startDate": "2027-02-25T00:00:00Z",
  "executeType": "DATE", "executeDate": "25,26,27",
  "executeMonth": "JAN,FEB,MAR,…,NOV",
  "flatStatus": false }
```

HYBRID SET-UP IN THE DASHBOARD

Collection	Cahaya Kids Academy · no tax
Plans	Tuition (Per Unit), Tadika, Taska
Coupon	Sibling 10%, from the second child
One-offs	Exam and event fees: Generate Bill
Operations	Pause, resume and refresh cards

What changes for the academy

	Today	With FlexiBill
Fee day	Reminders, screenshots, chasing	Charged on the 25th, retried twice
Proof of payment	Screenshots in chats	Email receipts; live status in the console
Siblings and add-ons	Manual sums every month	Your ledger returns each child's amount
December	Refunds and credit notes	Not billed: the calendar says Jan–Nov
Expired cards	The admin chases the parent	A refresh link goes out by email

1 tap
per enrolment, at registration

0
screenshots to match by hand

3
attempts per cycle: 25th, 26th, 27th

WHY SIGN NOW The next intake is the easiest switch: every new family starts on auto-pay.

05 · A2 · GYMS, MARTIAL ARTS, DANCE AND SWIM

Memberships renew monthly; collection does not

HYBRID | RECIPES A AND C · FIXED AMOUNTS | SEGMENT A · DIRECT MERCHANT

HOW THEY COLLECT TODAY

1. Members renew at the front desk or by transfer each month
2. Coaches collect class fees in cash after sessions
3. Freeze requests live on sticky notes and WhatsApp
4. Lapsed members keep training until someone notices

⚠ **Revenue depends on who remembers: members or staff.**

ARENA SPORTS HUB · PETALING JAYA · ILLUSTRATIVE

Gym, Off-Peak	**MYR 99.00 / month**
Gym, All-Access	**MYR 159.00 / month**
Kids taekwondo, ballet, swim	**MYR 140.00–200.00**
Belt grading, once	**MYR 60.00**

MYR 193,700

billed every month across 1,480 members

SST, where it applies, is set once per collection.

Six extreme cases every front desk has met

01 Two-month freeze for an injury

Inactivate the bill, activate it on return: the membership survives.

`Inactivate / Activate Bill`

02 Swim lessons every Saturday

Charge per lesson each Saturday instead of per month.

`executeType DAY · "SAT"`

03 Terms start Jan, Apr, Jul and Oct

Term fees are charged on the 1st of those four months only.

`executeMonth "JAN,APR,JUL,OCT"`

04 Belt grading and competitions

A one-off invoice by email keeps the monthly amount clean.

`Generate Bill API`

05 Declined card at the turnstile

The failure reaches your access system; a refresh link goes out.

`URL Notification`

06 Enrol in December, start in January

Verify the card now; the first real charge is on 1 January.

`useOrderAmount: false`

Hybrid build: front desk, app, Pricing Table

THREE ENTRIES
Member app, front desk or promo Pricing Table

→

DOKU CHECKOUT
Pays the first month and saves the card

→

SCHEDULER
Monthly on the 1st, retries on the 2nd and 3rd

→

NOTIFICATIONS
Every result reaches your access control

→

FRONT DESK
Freezes and card refresh from the console

REGISTER BILL · KEY FIELDS

```
"order": { "amount": 159.00, "currency": "MYR" },
"payment": { "useOrderAmount": true },
"recurring": { "billNumber": "ASH-2210",
  "startDate": "2027-02-01T00:00:00Z",
  "executeType": "DATE", "executeDate": "01,02,03",
  "executeMonth": "JAN,FEB,MAR,…,DEC",
  "flatStatus": true }
```

HYBRID SET-UP IN THE DASHBOARD

Collection	Arena Sports Hub · SST as applicable
Plans	Off-Peak, All-Access, Family
Term plan	Kids swim term · MYR 540.00
Coupon	Joiner promo on the Pricing Table
One-offs	Grading fees via Generate Bill

What changes for the club

	Today	With FlexiBill
Renewal	Front-desk queue on the 1st	Charged on the 1st, retried on the 2nd and 3rd
Freezes	Sticky notes and disputes	Inactivate, then Activate: one click each
Class fees	Cash after sessions	Weekly or monthly charges per child
Lapsed members	Train free until noticed	Your access system hears every failure
One-off fees	Collected at the counter	Invoice by email with a payment link

1 click
to freeze or resume a membership

3
attempts: the 1st, 2nd and 3rd

0
cash envelopes after class

WHY SIGN NOW Put the next promotion on the Pricing Table: every joiner arrives on auto-pay.

B

SEGMENT B · PLATFORMS

One integration unlocks many merchants

They own the interface

Parents, residents and members already open their app.

They hold the ledger

Every amount is known before the charge.

They sign once

One build switches on every client they serve.

STORIES **B1 · School systems** **B2 · JMB/MC software** **B3 · Season parking** **B4 · Co-living**

05 · B1 · SCHOOL AND TUITION MANAGEMENT SYSTEMS

One parent app, 300 schools, 300 ways to pay

API-ONLY | RECIPE B · PAY NOW, AMOUNT VARIES | SEGMENT B · PLATFORM

HOW THEY COLLECT TODAY

1. The platform issues fee statements inside the parent app
2. Each school collects on its own: transfer, payment link or cash
3. Parents pay by hand every month, then upload proof
4. Schools ask for auto-debit; the platform has none to offer

⚠ **The platform owns the parent relationship, not the payment moment.**

EDUNOTE PLATFORM · 300 SCHOOLS · ILLUSTRATIVE

Private schools and tadika	**230 schools**
Tuition centres	**70 centres**
Families on the app	**48,000**
Average monthly statement	**MYR 420.00**

MYR 20.16M

in statements every month, none on auto-pay

Fees vary by school; no SST at these fee levels.

05 · B1 · SCHOOL AND TUITION MANAGEMENT SYSTEMS

Six extreme cases a platform must survive

01 One parent, three children, two schools

A bill per child per school, one family view in your app.

`billNumber per child`

02 Transport route added in May

The next cycle fetches the new statement, with no re-registration.

`flatStatus: false`

03 Different term calendars per school

Each school keeps its own months; adjust later without code.

`Edit Execute Schedule`

04 Scholarship covers 40% of fees

Your endpoint returns the net amount; the parent pays the rest.

`URL Amount`

05 A school leaves the platform

Only its bills stop; every other school keeps collecting.

`Inactivate Bill`

06 Card declined on statement day

Your app shows the failure and sends the refresh link.

`URL Notification`

05 · B1 · SCHOOL AND TUITION MANAGEMENT SYSTEMS

One integration switches on every school

PARENT APP
Auto-pay button on every statement

→

REGISTER BILL
Signed with the school's credentials

→

DOKU CHECKOUT
Pays this month, saves the card

→

SCHEDULER
Each school's calendar and months

→

URL AMOUNT
Returns each child's statement total

YOUR URL AMOUNT ENDPOINT

```
GET /fees/amount?bill_number=EDN-SJK-0142-02
    &customer_id=PAR-2231

200 OK
{ "billing_amount": 486.50 }

// fees 520.00 + bus 60.00 - scholarship 93.50
```

WHAT THE PLATFORM BUILDS

Front end	Auto-pay button in the parent app
Endpoint	URL Amount returning each statement
Handler	Notifications update fee status
Credentials	One codebase, keys per school
Open item	School onboarding model with DOKU

What changes for the platform and schools

	Today	With FlexiBill
Parents	Pay by hand, upload proof	One tap in your app; statements charged automatically
Schools	Chase and reconcile alone	Paid on schedule; status visible in your app
The platform	Sends statements	Owns the payment moment: a reason schools stay
Fee changes	Parents top up the difference	The next cycle charges the updated statement
Card data	None, and none wanted	Still none: the vault stays at DOKU

1 build
for every school you onboard

0
card numbers on your servers

300
schools switched on together

WHY SIGN NOW Every school onboarded after launch starts with auto-pay built in.

05 · B2 · JMB AND MC MAINTENANCE FEES

Charges are statutory; collection is manual

API-ONLY | RECIPE D · VERIFY NOW, LEDGER DECIDES | SEGMENT B · PLATFORM

HOW THEY COLLECT TODAY

1. Management issues quarterly notices; owners must pay within 14 days
2. Owners pay by transfer, cheque or at the management office
3. Late payers accrue interest of up to 10% a year, charged daily
4. Arrears surface at the AGM, where owners in arrears cannot vote

⚠ **Security, cleaning and lift contracts wait on the slowest payers.**

STRATAHUB APP · 180 DEVELOPMENTS · ILLUSTRATIVE

Example parcel	**1,100 sq ft**
Maintenance, MYR 0.30 psf	**MYR 330.00 / month**
Sinking fund, 10%	**MYR 33.00 / month**
Quarterly bill	**MYR 1,089.00**

MYR 16.3M

billed a month across 45,000 parcels

Sinking fund: at least 10% of charges (SMA 2013).

Six extreme cases from the strata world

01 Arrears plus late-payment interest

Your ledger returns charges, arrears and interest; DOKU charges that.

`flatStatus: false`

02 Two funds, two accounts

Maintenance and sinking fund stay separate lines in your ledger.

`open item: settlement`

03 Defaulter on an instalment plan

A separate bill charges the agreed dates only.

`executeType FULLDATE`

04 Owner lives overseas

Registers a card from abroad through the emailed checkout link.

`paymentLink by email`

05 Unit sold mid-quarter

The seller’s bill ends and the buyer registers; no cross-billing.

`endDate + new billNumber`

06 Special levy for lift works

Added to the ledger for approved cycles, then removed.

`URL Amount`

05 · B2 · JMB AND MC MAINTENANCE FEES

API-only build: quarterly, from your ledger

RESIDENT APP

```

OPEN ITEMS TO SETTLE BEFORE LAUNCH

Settlement	Split per fund or two accounts
Consent	By-law wording for auto-debit
Interest	Your ledger applies the 10% rule
Payer	Owner, or tenant for the owner
Confirm with	DOKU and the JMB's counsel

What changes for management and owners

	Today	With FlexiBill
Quarter start	Notices, then 14 days of waiting	Charged on day 1, retried on days 2 and 3
Arrears and interest	Calculated by hand, disputed	Ledger-driven amounts, charged exactly
Owners abroad	Wire transfers and missed notices	A card registered once, from anywhere
The AGM	Arrears lists and lost votes	Owners on auto-pay stay in good standing
The platform	Sends notices	Collects: a reason developments renew

Day 1
cash for security and cleaning

0
cheques to deposit

180
developments on one integration

WHY SIGN NOW Start with the next quarterly notice: invite owners to switch on auto-pay.

05 · B3 · SEASON PARKING · RECOMMENDED

Season passes are fixed fees chased like fines

API-ONLY | RECIPE B · PAY NOW, AMOUNT VARIES | SEGMENT B · PLATFORM | RECOMMENDED

HOW THEY COLLECT TODAY

1. Pass holders renew at a counter or by transfer before the 1st
2. Operators match payments to car plates and access cards by hand
3. Unpaid passes stay active until someone deactivates them
4. Corporate tenants pay for dozens of passes on one invoice

⚠ **Every month, the barrier opens for passes nobody has paid for.**

PARKFLOW PLATFORM · 60 BUILDINGS · ILLUSTRATIVE

Car season pass	**MYR 180.00 / month**
SST at 6%, parking	**MYR 10.80**
Total per car pass	**MYR 190.80**
Motorcycle pass with SST	**MYR 42.40**

MYR 3.43M

billed a month across 18,000 car passes

Car parking services carry 6% service tax.

05 · B3 · SEASON PARKING · RECOMMENDED

Six extreme cases at the barrier

01 Payment fails on the 1st

Retries on the 2nd and 3rd; your gate system hears each result.

`executeDate "01,02,03"`

02 A company pays for 40 staff

One corporate payer, one bill per plate, one card on file.

`billNumber per plate`

03 The building raises the rate

Dynamic bills pick up the new rate next cycle, no re-registration.

`flatStatus: false`

04 Lost access card

The replacement fee is invoiced once by email.

`Generate Bill API`

05 Starts on the 18th

The first checkout collects a prorated month: MYR 86.17.

`useOrderAmount: true`

06 Tenant moves out

The bill ends on the move-out date; the access card goes dark.

`endDate`

05 · B3 · SEASON PARKING · RECOMMENDED

API-only build: payment and barrier in sync

PARKING APP
Choose a pass, add the car plate

→

REGISTER BILL
billNumber = building + plate

→

DOKU CHECKOUT
Pays MYR 86.17 prorated, saves card

→

SCHEDULER
1st of each month, retries 2nd, 3rd

→

ACCESS CONTROL
Paid: active. Failed: suspended.

REGISTER BILL · KEY FIELDS

```
"order": { "amount": 86.17, "currency": "MYR" },
"payment": { "useOrderAmount": true },
"recurring": { "billNumber": "PF-MVT-WXY1234",
  "startDate": "2027-04-01T00:00:00Z",
  "executeType": "DATE", "executeDate": "01,02,03",
  "executeMonth": "JAN,FEB,MAR,…,DEC",
  "flatStatus": false }
// URL Amount each month → 190.80 (with 6% SST)
```

WHAT THE PLATFORM BUILDS

Front end	Pass purchase with plate capture
Endpoint	URL Amount: rate plus 6% SST
Handler	Notification flips the pass status
One-offs	Card replacement via Generate Bill
Tax	SST computed in your ledger

05 · B3 · SEASON PARKING · RECOMMENDED

What changes for operators and pass holders

	Today	With FlexiBill
Renewal	Counter queues before the 1st	Charged on the 1st, retried twice
Unpaid passes	The barrier keeps opening	Suspended automatically by your system
Corporate passes	One invoice, manual matching	One payer, one bill per plate
Rate changes	Re-issue every pass	The next cycle picks up the new rate
SST	Added by hand	6% included in every charge

0
counter renewals each month

1
integration for every building

6%
SST applied on every charge

WHY SIGN NOW Launch with one building's waiting list: new passes start on auto-pay.

05 · B4 · CO-LIVING AND STUDENT HOUSING · RECOMMENDED

Rent is fixed; utilities and tenants are not

API-ONLY | RECIPE B · PAY NOW, AMOUNT VARIES | SEGMENT B · PLATFORM | RECOMMENDED

HOW THEY COLLECT TODAY

1. Operators send rent reminders by chat every month
2. Air-conditioning is metered per room and billed separately
3. International students pay from home-country cards and banks
4. Move-outs, room swaps and semester breaks break the spreadsheet

⚠ **Operators spend the month reconciling instead of filling beds.**

ROOMMATE PLATFORM · 35 OPERATORS · ILLUSTRATIVE

Single room	**MYR 750.00 / month**
Metered air-con, average	**MYR 42.60 / month**
Deposit, two months	**MYR 1,500.00**
First checkout	**MYR 2,250.00**

MYR 1.9M

billed a month across 2,400 beds

Residential rental: no SST line.

05 · B4 · CO-LIVING AND STUDENT HOUSING · RECOMMENDED

Six extreme cases from a student residence

01 Deposit plus first month at sign-up

Cycle 1 collects MYR 2,250.00; later cycles fetch rent plus air-con.

`useOrderAmount: true`

02 Air-con metered per room

Your ledger adds this month's reading to the rent.

`URL Amount`

03 Semester ends in August

The tenancy end date stops the schedule; nothing to cancel.

`endDate`

04 Paying from a home-country card

Saved on DOKU Checkout; approval rests with the card issuer.

`DOKU Checkout`

05 Room swap mid-tenancy

New rent applies next cycle: same bill, same card.

`flatStatus: false`

06 Damage found at move-out

A one-off invoice by email with a payment link.

`Generate Bill API`

05 · B4 · CO-LIVING AND STUDENT HOUSING · RECOMMENDED

API-only build: tenancy in, charges out

TENANT APP
Signs the tenancy, taps auto-pay

→

REGISTER BILL
endDate = tenancy end date

→

WHAT THE PLATFORM BUILDS

Front end	Tenancy sign-up with auto-pay
Endpoint	URL Amount: rent plus meter reading
Handler	Notifications to operator dashboards
One-offs	Move-out damage via Generate Bill
Tax	Residential rent: no SST line

What changes for operators and tenants

	Today	With FlexiBill
Rent day	Chat reminders and transfers	Charged on the 5th, retried twice
Utilities	Separate bills, paid late	Added to the same charge from meter data
Students abroad	Wire transfers and delays	A card saved once on DOKU Checkout
Tenancy end	Manual stop, missed charges	The schedule ends on the tenancy date
Operators	Reconcile all month	One console across every building

1 charge
rent and air-con together

0
chasing messages on rent day

35
operators on one integration

WHY SIGN NOW Switch on before the next intake: every new tenancy starts on auto-pay.

CHAPTER 06 · WHAT CHANGES

From chasing to charging, in six shifts

BEFORE	AFTER
~~Monthly reminders~~	One tap at DOKU Checkout
~~Transfer screenshots~~	A notification on every charge
~~Spreadsheet reconciliation~~	Manage Recurring and Register Report
~~Expired cards, silent churn~~	Retry dates and refresh links
~~Card data on your side~~	Tokens in DOKU's PCI-DSS vault
~~A checkout that takes over~~	Your interface keeps the customer

06 · PROOF POINTS

The numbers behind the point of view

84%

Unique-bill success rate

Malaysia

65%

Recovery rate

Indonesia · failed charges brought back

~14%

Card-lifecycle failures

Expired or replaced cards, answered with refresh links

50,000

Rows in one batch file

Indonesia · merchant-hosted Batch Upload

FlexiBill reference figures; results vary by merchant, sector and card mix.

06 · GO-LIVE

Four steps from sandbox to the first cycle

1

Activate Account Billing

Turn on a card channel with SALE + RECURRING or SALE + MOTO.

2

Set your endpoints

New Recurring Alert URL and URL Notification; add URL Amount for dynamic bills.

3

Build and test in sandbox

Call Register Bill, open the paymentLink and run a checkout end to end. Hybrid: add Collections, Plans and the Pricing Table.

4

Go live, small first

Switch to production and start with one branch, one school or one building.

PILOT SHAPE **One use case · one site · one billing cycle — then scale to every branch, school or building.**

06 · WHY SIGN NOW

Six reasons not to think twice

No card data on your servers

Tokens live in DOKU's PCI-DSS vault; you keep a billNumber.

One call, one link

Register Bill returns the DOKU Checkout link to send anywhere.

Two markets, one pattern

MYR in Malaysia, IDR in Indonesia, the same flow.

Your calendar, exactly

Dates, weekdays or exact days, with months skipped.

Recovery built in

Retry dates, the one-bill guard and card refresh links.

No-code operations

Pause, resume, reschedule and report from the console.

DOKU · FlexiBill

NEXT STEP

One redirect. Every cycle collected.

Pick one story from this deck. Pilot it with one branch, one school or one building for one billing cycle — then scale.

Book a build session with your DOKU account manager
