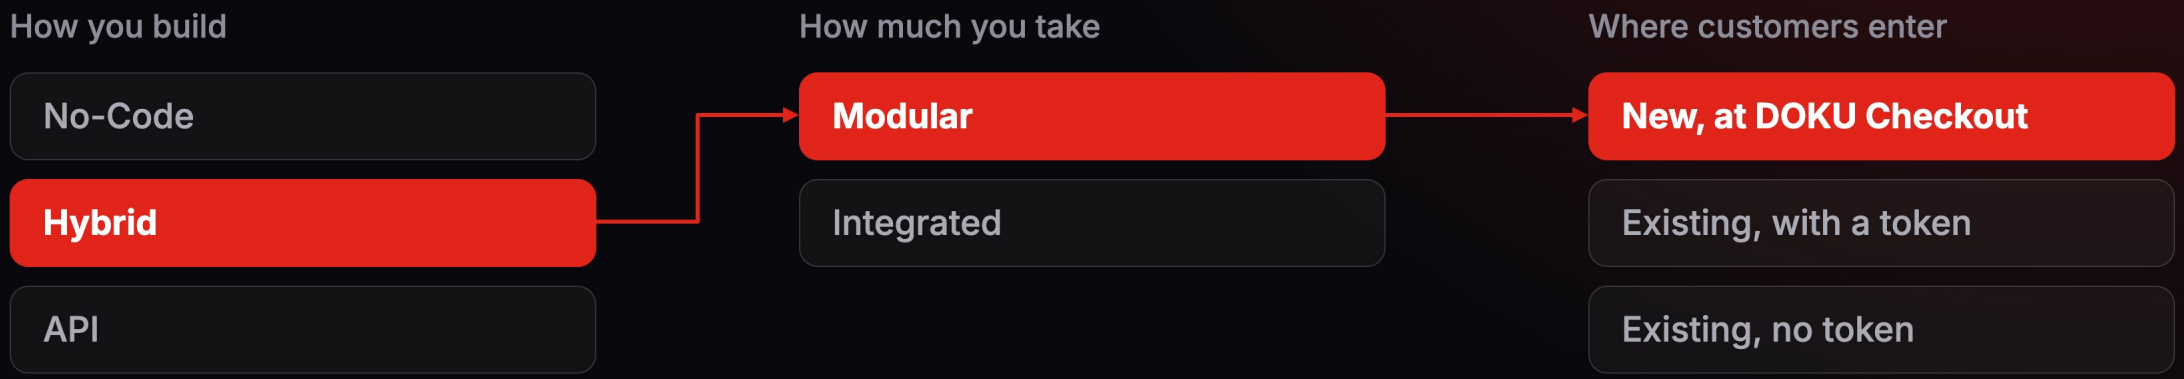
FlexiBill

Point of view for Malaysia and Indonesia

FlexiBill, your way.

Build with no code, by API, or both. Take one module or the whole engine.
Start new customers at DOKU Checkout, or bring the ones you already bill.



Highlighted: one merchant's route. Every route runs on the same engine.

October 2026

PoV Start here

How this deck works

The story, in eight chapters

1 Why recurring collection breaks
2 The point of view
3 Choice 1: how you build
4 Choice 2: modular or integrated
5 Choice 3: where customers enter
6 The engine underneath
7 Malaysia use cases in MYR, six removable modules
8 What changes, and how to start

Know your line of business?

Find it on the next slide, with its module and its route.

Slide 3

Know the number you want to move?

Twelve business goals, each with its lever and where to look.

Slides 4 and 5

Modules A1 to B4 are removable.

Each module is five slides. Take any of them out for an audience and the story still holds.

PoV Entry by line of business

Each line maps to a removable module and a route

Start from your line of business

Segment A: high-volume, fixed monthly fees, painful collection

A1

Tuition and enrichment centres, private kindergartens and taska

Hybrid | Modular first | Checkout + no token

A2

Gyms, martial arts, dance and swim schools

Hybrid | Modular first | Checkout + token

Segment B: platform-led, one integration unlocks many merchants

B1

School and tuition management systems

API | Integrated | Checkout + no token

B2

Property management software for JMB and MC maintenance fees

API | Integrated | Checkout + no token

B3 Recommended

Season parking platforms

API | Integrated | Checkout + no token

B4 Recommended

Co-living and student housing platforms

Hybrid | Integrated | Checkout + no token

Start from your business goal: grow

Acquisition

Publish each offer as a Pricing Table link or QR that checks out at DOKU Checkout.

Measure: enrolments per campaign

Door A · A1 · A2

Activation

Start no-code with one Collection and two or three plans; add the API later without rebuilding.

Measure: days to the first live bill

No-Code · Levels

Conversion

Highlight one best-offer plan, show what each plan gives, and keep the form short.

Measure: visits that subscribe

Pricing Table

Expansion and upsell

Sell add-ons as Per Unit plans; use Tiered, Volume and Stairstep for bigger commitments.

Measure: revenue per member

Rulebook · A2 · B4

Pricing agility

Launch a new price as a new plan or a coupon from the dashboard, with no release.

Measure: days to a live price

Rulebook

Market expansion

One engine for Malaysia and Indonesia, with local currency, tax and payment methods.

Measure: time to first live merchant

Markets

Start from your business goal: protect and run

Retention

Auto-debit removes the monthly decision; offer a freeze before a cancellation.

Measure: churn, share on auto-debit

Door C · A2

Revenue recovery

Retries on your dates, update links and Confirm Payment make a failed charge routine.

Measure: failures recovered

Recovery

Cash flow

Bill before the due date, charge on the date, retry on the next ones.

Measure: days from due date to cash

Calendar

Operational efficiency

Bulk billing from the file you keep, Manage Recurring for exceptions, scheduled exports.

Measure: admin hours per cycle

Operations

Compliance and risk

Cards live as DOKU tokens, so PCI DSS scope can move to SAQ A; tax is set per Collection.

Measure: findings, consent coverage

Door B

Data sovereignty

Keep your own system as the record; FlexiBill works through the API and webhooks.

Measure: records migrated: zero

API · B1 · B2

A tuition centre with 420 families, illustrative

The monthly chase, day by day

25th
Reminders go out

Typed one by one into class chat groups.

1st
Fees are due

Transfers arrive with no reference, or a nickname.

3rd
Receipts pile up

Screenshots in chat, some for last month.

5th
Matching starts

Bank lines to students, one row at a time.

7th
Second round

Calls to the same families as last month.

10th
A card bounces

An expired card nobody knew about.

15th
Still open

Next month's reminders are ten days away.

15 days spent collecting a fee that was due on the 1st, every month, for every family. Fixed fees and high volume make the chase predictable, and expensive.

Five places recurring revenue leaks

Late payments

Fees arrive after the due date, after a reminder, or after a call.

FlexiBill

Charged on your date; reminders go out by themselves.

Failed charges

Expired, replaced and limited cards: a baseline of about 14% card-lifecycle failures.

FlexiBill

Retries on your next dates, then an update link.

Manual matching

Transfers without a reference are matched to customers by hand.

FlexiBill

Every payment lands on its own bill.

No live view

Nobody can say who has paid this month without a spreadsheet.

FlexiBill

Billing Summary: expected, received, outstanding, overdue.

Silent churn

Customers who stop paying are noticed weeks later.

FlexiBill

Expired and Canceled webhooks, and a freeze before a cancel.

Six ways merchants bill today

Spreadsheets and bank transfers

Prices in a sheet, invoices by hand, transfers matched one by one.

Rules set once; every bill, reminder and receipt goes out by itself.

Door C: no token | No-Code

One account number for everyone

Money arrives, but not which month, which bill or who is missing.

Each bill has its own amount, due date and pay button, so it matches itself.

Door C: no token | No-Code

Payment links from a gateway

A link per payment; the calendar lives in someone's head.

Plans, calendar and reminders live in FlexiBill; links become renewing plans.

Door C: no token | No-Code or Hybrid

A gateway with stored cards

Cards are stored; plans, coupons, tax and reports are manual.

Tokens, plans, coupons, tax and reports in one place, with retries and update links.

Door B: token | Hybrid

Subscription software

Plans and coupons exist; local methods need another provider.

One checkout for local methods and auto-debit, with your plans intact.

Door B or C | Hybrid

Your own billing engine

Your engine owns the schedule; collection still needs a partner.

Keep your engine as the brain; FlexiBill and DOKU become the hands.

Door A or B | API

The point of view

Keep your interface in front. FlexiBill runs every cycle behind it.

Your website, app, platform or a FlexiBill Pricing Table stays where customers already are. DOKU Checkout is where they pay and save a card. FlexiBill bills, charges, retries and reports on your calendar.

Three choices shape every setup

1 How you build	2 How much you take	3 Where customers enter
No-Code Your team sets it up in the dashboard.	**Modular** Switch on only the pieces you need.	**New, at DOKU Checkout** They pick a plan, then pay and save a card at checkout.
Hybrid API where it touches your systems, dashboard for the rest.	**Integrated** Connect the whole engine to your systems.	**Existing, with a token** Cards you already hold move into DOKU tokens.
API Your systems drive FlexiBill through calls and webhooks.		**Existing, no token** Bill them first; they save a card when they pay.

Highlighted: a tuition centre's first month. Hybrid, modular, new families through DOKU Checkout. Every combination runs on the same engine, and the route can change later without a rebuild.

Who owns what

Your interface

You own it

- Your brand
- Sign-up and plan choice
- Customer records
- Your service: classes, access, rooms

Registration and redirect to checkout

Webhooks: Activated, Renewed, Expired, Canceled

FlexiBill engine

DOKU runs it for you

- Collections, plans, coupons, tax
- Calendar and retries
- Bills, reminders, receipts
- Manage Recurring
- Reports and exports
- API and webhooks

Charge the saved token on your dates

Payment result, every cycle

DOKU payments

Where money moves

- DOKU Checkout
- Card tokens
- Malaysia: card, FPX online banking, e-wallet
- Indonesia: card, VA, QRIS, e-wallet, direct debit
- Settlement

No-Code, Hybrid or API

No-Code

Level 1

Who runs it
Your admin, in the dashboard.

What you touch
Collections, plans, Pricing Table, bulk billing.

Best for
Centres and studios without IT, live in days.

Hybrid

Most merchants

Who runs it
Your admin, plus a developer.

What you touch
Registration and webhooks by API; the rest in the dashboard.

Best for
Merchants with an app, a member system or a booking tool.

API

Level 3

Who runs it
Your developers.

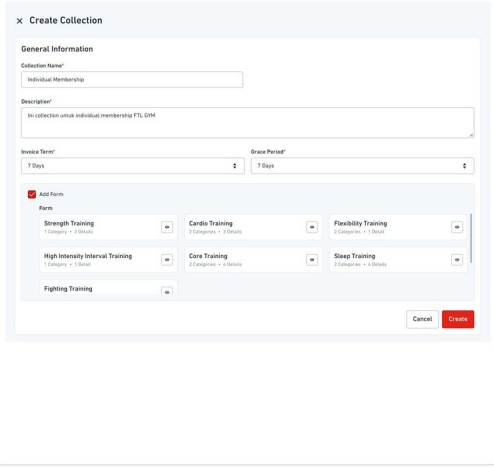
What you touch
Registration, Create Subscription, Generate Bill and webhooks.

Best for
Platforms and enterprises with their own billing logic.

One engine underneath. Moving from No-Code to Hybrid to API never means starting again: your Collections, plans and customers stay where they are.

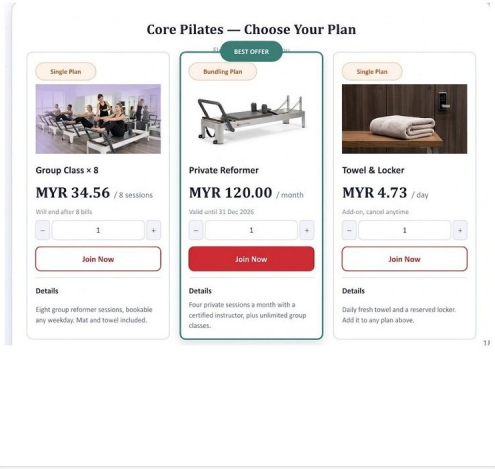
No-Code: live from the dashboard

1 Set up



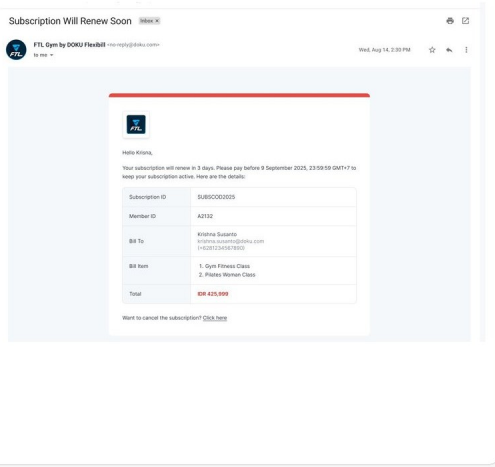
Create a Collection: term, grace period, tax and the form fields you need.

2 Sell



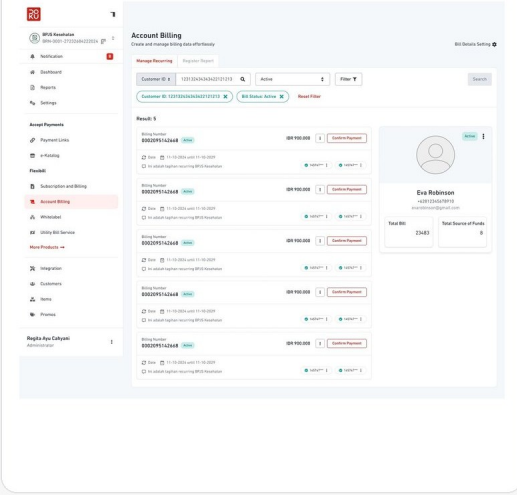
Publish a Pricing Table link or QR; checkout creates the subscription and the member.

3 Bill



Invoices, reminders and receipts go out by email on your dates.

4 Run



Manage Recurring shows every bill, card and action, without a developer.

Shapes abbreviated; full fields in the DOKU API reference

API: the calls that do the work

Billing Automation API: subscriptions and bills

```
POST /subscription-core/v1/subscription
{ "collection_code": "CERDIK2027",
  "plans": [{ "plan_code": "TUITION", "qty": 1 }],
  "coupons": ["SIBLING10"] }

POST /bill-collection-core/v1/generate/invoice
{ "bill_identifier": "INV-0042", "amount": 120.00 }
```

Recurring API: DOKU Hosted Scheduler

```
POST /ab-core-api/v1/billing-registration
{ "recurring": {
    "billNumber": "0212540000",
    "executeType": "DATE",
    "executeDate": "1;2;3",
    "flatStatus": true } }
// 200: paymentLink opens DOKU Checkout
```

Webhooks for every status, signed with HMAC-SHA256

Activated
First payment done: open the service.

Renewed
This cycle is paid: extend access.

Expired
Unpaid after retries and grace: pause.

Canceled
Ended by you or the customer: close.

Hybrid: your app signs up, the dashboard runs it

Through the API
Your developers

- Registration from your app or website
- Webhooks into your member records
- Generate Bill for charges that vary

FlexiBill engine

One record of every bill, whoever set it up

In the dashboard
Your team

- Collections, plans, coupons and tax
- Pricing Table for walk-ins and campaigns
- Manage Recurring: update links, Confirm Payment
- Billing Summary and scheduled exports

Start modular, integrate later

Nothing set up in step 1 is rebuilt in step 3

Step 1
Pricing Table and dashboard only. Live first, connect later.

Step 2
Add webhooks, so your app knows who is paid.

Step 3
Register customers from your app by API.

Modular or Integrated, and the path between

Modular

Switch on the pieces you need, from the dashboard.

- One module or several; add more any month
- Your team runs it, no developer

Hybrid path

Run no-code today, connect your systems as you grow

Integrated

Your systems talk to FlexiBill by API and webhooks.

- Your app drives sign-up and status
- FlexiBill and DOKU run collection

Level 1

Launch without code

Modular: dashboard, Pricing Table and bulk billing. Live in days, not months.

Level 2

Automate collection

Auto-debit on your dates, retries, update links and reports on autopilot.

Level 3

Orchestrate by API

Integrated: your app or engine drives FlexiBill through the API, webhooks and tokens.

Twelve modules on the shelf, and one on the way

Billing Automation

Price, sell, present and track every bill

Collections and plans

One rulebook; six pricing models.

Coupons and tax

Offers and freezes; SST per Collection.

Pricing Table

Up to 10 plans on a hosted page.

Member Center

Profiles, custom forms and groups.

Bulk billing

Up to 1,000 bills per upload.

Email bills

Invoices, reminders and receipts.

Reports and exports

Pick columns; email or SFTP.

Automation API

Create Subscription, Generate Bill.

Recurring

Money that arrives on its own

New

Card auto-debit

Recurring (Non-3DS), your acquiring bank.

DOKU Hosted Scheduler

Charges on your dates, with retries.

Manage Recurring

Update links and Confirm Payment.

New

Card Tokenization

Stored cards become DOKU tokens.

In development

Registration API V2

Purchase-first or check-first.

Signs it is time for the next level

The sign	The move	Module	Next level
Your bills pass 500 a month	Move from one-by-one billing to bulk uploads.	Bulk billing	Level 2
More than 10% of customers pay late	Switch on auto-debit and reminders.	Card auto-debit	Level 2
Failed payments pass 5% of charges	Add calendar retries and update links.	Manage Recurring	Level 2
You open a second branch or programme	Give it its own Collection and member groups.	Member Center	Level 2
Management asks for numbers every week	Schedule exports to email or SFTP.	Reports and exports	Level 2
Developers are free, or bills pass 2,000 a month	Integrate by API and webhooks.	Automation API	Level 3
You still store customer cards	Tokenize them and move to SAQ A.	Card Tokenization	Level 3

Three doors into FlexiBill

A New customers at DOKU Checkout

They pick a plan in your interface or on a Pricing Table, pay the first bill at DOKU Checkout and save the card there. FlexiBill charges it on your dates.

The customer
Pays once, and is set.

Fits when
New sign-ups, enrolments, move-ins, returning customers.

B Existing customers with a token

You already hold their cards, on your systems or at another gateway. The cards move into DOKU tokens and bill on your calendar.

The customer
Nothing, unless an update link is needed.

Fits when
Switching gateways, or retiring your own card store.

C Existing customers without a token

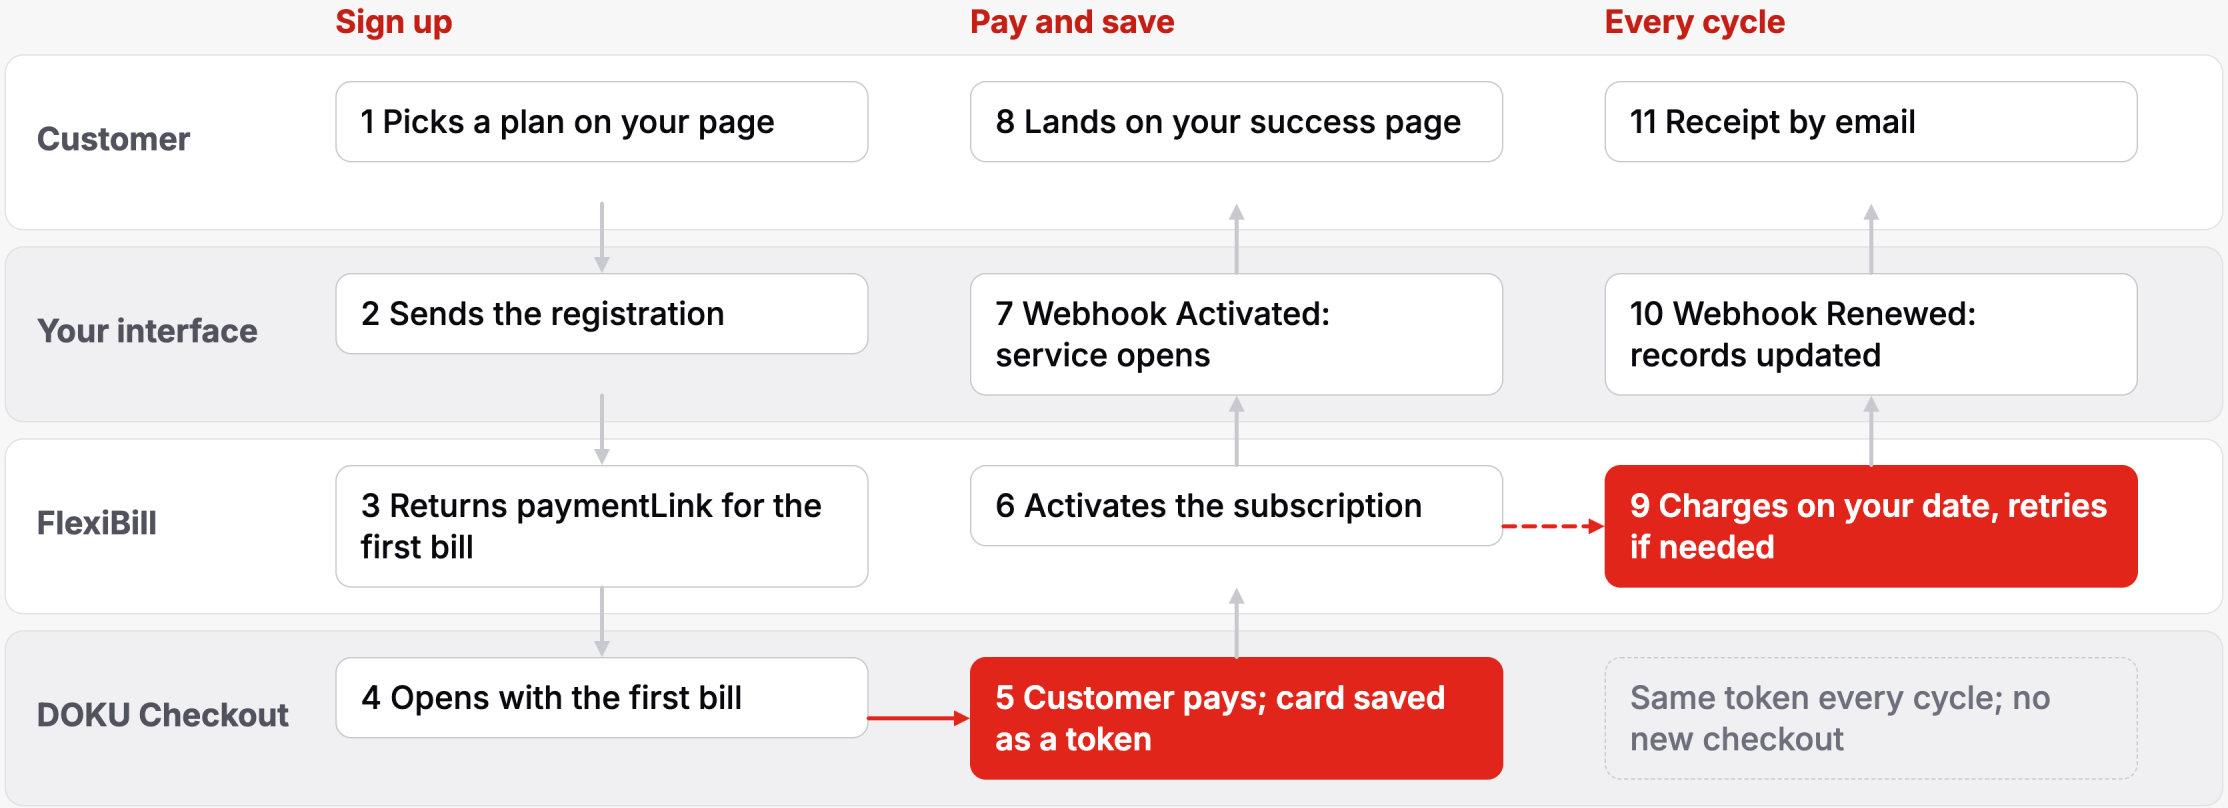
You bill them today by transfer or link. FlexiBill sends each bill with a pay button; paying by card, they can save it for auto-debit.

The customer
Pays the first bill their usual way.

Fits when
Most merchants, in their first month on FlexiBill.

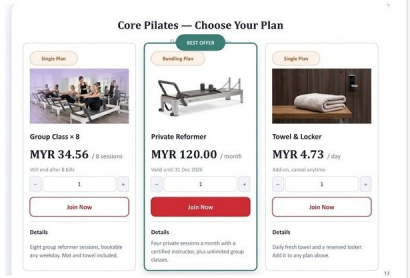
Most merchants open two doors at once: Door A for new customers, and Door B or C for the ones they already bill.

Door A: DOKU Checkout as the entry point



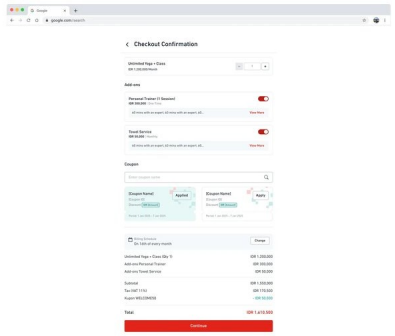
What the customer sees

1 Picks a plan



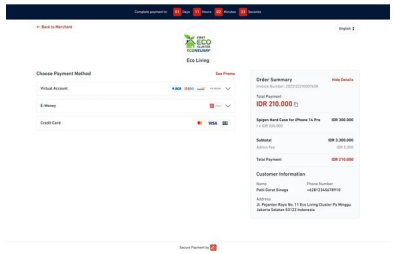
Core Pilates table in MYR: plans, prices, a best offer.

2 Confirms the order



Add-ons, coupon, tax and the billing date, before paying.

3 Pays at DOKU Checkout

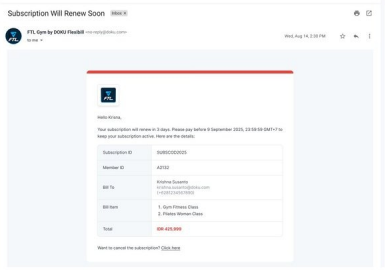


The customer picks a method and pays.

4 Sees the receipt

Payment success, with the invoice number.

5 Is reminded



Renewal email three days before the next charge.

Door B: bring the tokens you already hold

Cards stored on your own systems

Upload them to Card Tokenization; each becomes a DOKU token. PCI DSS validation can move from SAQ D to SAQ A.

No PCI DSS licence

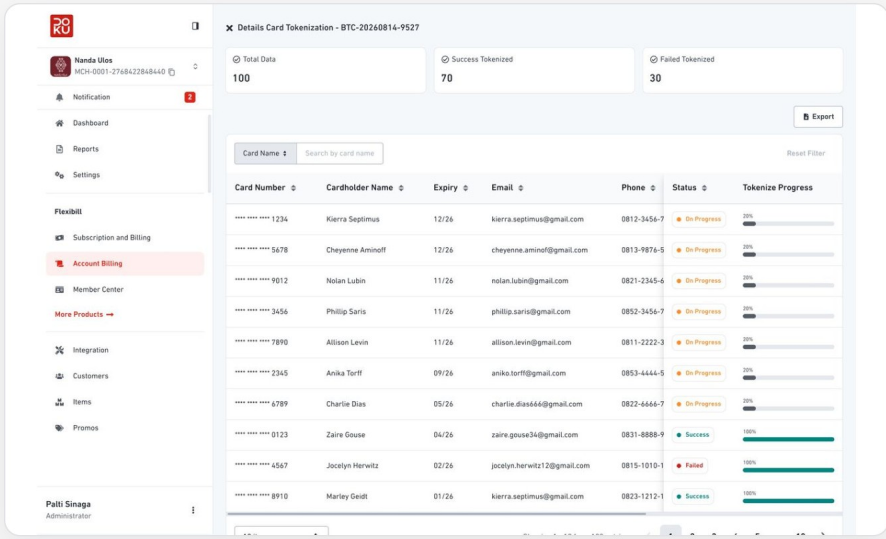
Use the Merchant Initiate file, processed by DOKU under PCI DSS controls.

Tokens at another gateway

That gateway sends a PCI DSS-compliant export, encrypted, straight to DOKU.

No export possible

Customers re-register with an update link and save a card at DOKU Checkout.



Card Tokenization batch: totals, per-card status and progress.

Security codes (CVV and CVC) are never migrated.

Indonesia: charge existing tokens in bulk with TKN_ batch files over SFTP, up to 50,000 rows.

5 Choice 3: where customers enter

Door C: bill first, then convert to auto-debit

1 Import
Customers into Member Center groups; up to 1,000 rows per upload.

2 Bill
By bulk upload, or by Generate Bill from your system.

3 Present
Each bill goes out by email with its amount, due date and a pay button.

4 Pay
Malaysia: FPX online banking, e-wallet or card. Indonesia: VA, QRIS, e-wallet, card, or WhatsApp through PayChat.

5 Convert
Paying by card, the customer can save it; from the next cycle auto-debit charges on your date.

From cycle two, two lanes run side by side

Saved a card
Charged on the 1st, retried on the 2nd and 3rd, one bill a month.

Kept their usual way
A bill with a pay button each month, and a reminder before it is due.

Open item for counsel: the auto-debit consent wording on checkout pages and bills.

The switch plan, cycle by cycle

Before the cut-over cycle | **In the cut-over cycle** | **After cycle one**

1. **Count** — Active customers, cards and tokens, by product.
2. **Check** — Your PCI DSS scope: do you store card data yourself?
3. **Map** — Plans, amounts and billing dates to Collections.
4. **Cut over** — Pick the date; stop the old schedule first.
5. **Test** — Run a small batch before the full move.
6. **Watch** — Failures in Manage Recurring, through the first cycle.
7. **Retire** — Delete local card data securely; validate with SAQ A.

Door B customers

Tokens arrive before the cut-over date and are charged on their usual billing date, so customers notice nothing.

Door C customers

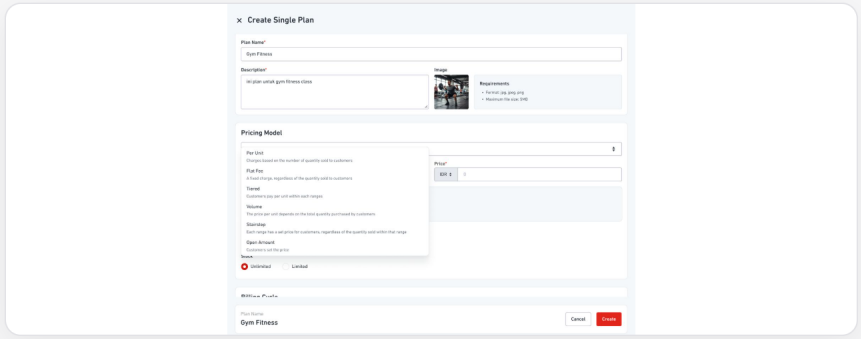
They receive their first FlexiBill bill in the cut-over cycle, and can save a card when they pay it.

One rulebook: Collection, Plan, Coupon, Tax

Collection: Cerdik 2027
Invoice term 7 days, grace 5 days, tax and the form

Monthly fee	Registration	Donation
RM 480.00	RM 350.00	Open amount

SIBLING10 EARLYBIRD Tax per Collection



The real model picker, in Create Single Plan

Six pricing models

Flat Fee
One price, whatever the quantity.
`RM 480.00 a month`

Per Unit
Price times quantity.
`RM 0.30 a sq ft × 1,000`

Tiered
Each band priced on its own.
`Seats 1–10 RM 50.00, 11+ RM 45.00`

Volume
The total sets one unit price.
`25 seats, all at RM 40.00`

Stairstep
A fixed price for each range.
`1–5 seats RM 200.00, 6–10 RM 350.00`

Open Amount
The customer sets the amount.
`Donations, deposits, top-ups`

Example: a monthly plan billed on the 1st

Your calendar, not an interval

Mon	Tue	Wed	Thu	Fri	Sat	Sun
			1 Charge	2 Retry	3 Retry	4
5	6	7	8	9	10	11
12	13	14	15	16	17	18
19	20	21	22	23	24	25 Bill out
26	27	28	29	30	31	

Execute types

`DATE`	A day of the month, 1 to 28.
`DAY`	A weekday, for weekly plans.
`FULLDATE`	One exact date, such as a yearly fee.

Calendar retries

executeDate "1;2;3": charge on the 1st, retry on the 2nd and 3rd.

Send One Bill/Month

Retries reuse the same bill, so the customer sees one bill a month, not three.

Gateway subscriptions are quick to start and retry by interval. FlexiBill retries on the dates you choose.

When a payment fails

1 **Charge fails on the 1st**
Expired, replaced or limited card.

2 **Retries on the 2nd and 3rd**
Same bill; paid on a retry ends it here.

3 **Update link**
The customer replaces the card in a minute.

4 **Confirm Payment**
Funds are back: charge the current cycle now.

5 **Webhook Renewed**
Access stays open; your records update.

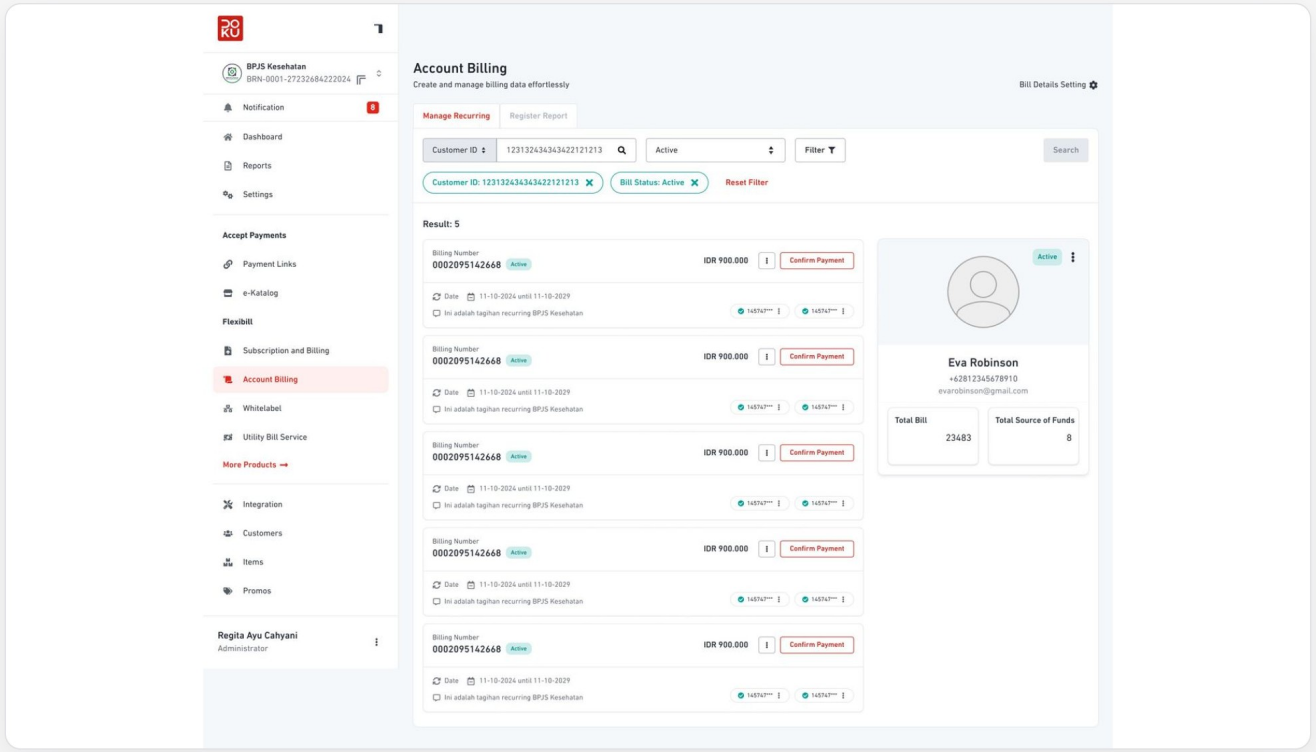
84%
Unique-bill success rate in Malaysia

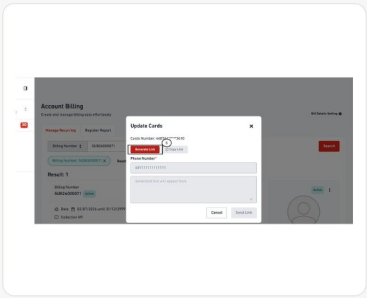
65%
Recovery rate in Indonesia

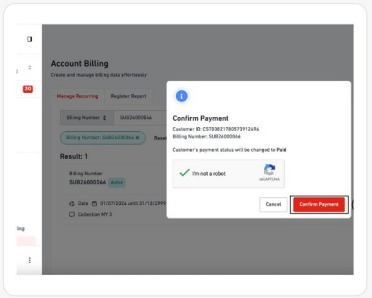
~14%
Card-lifecycle failure baseline, the problem every card plan starts with

Source: FlexiBill orchestration playbook proof points.

Operations without developers







Search
By customer ID or bill status.

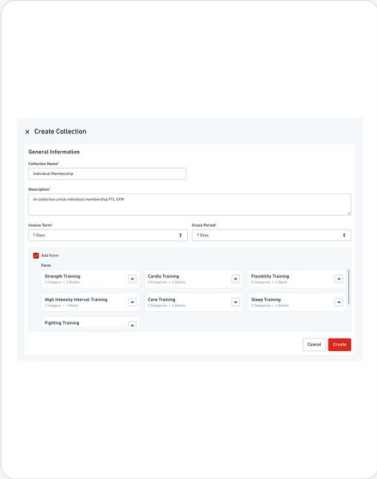
Update link
Send a link; the customer replaces the card.

Confirm Payment
Funds are back: charge this cycle now.

Billing Summary
Expected, received, outstanding, overdue.

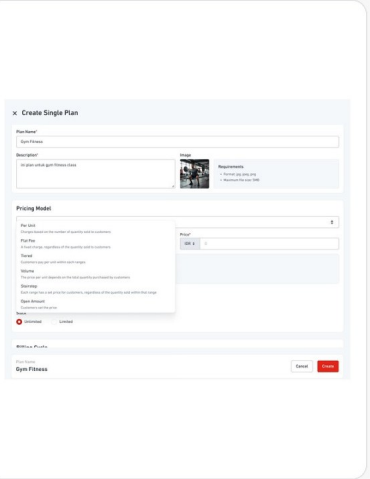
A Pricing Table in five steps

1 Collection



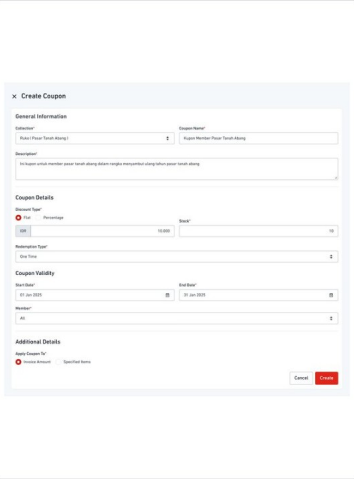
Name, invoice term, grace period, tax and form fields.

2 Plans



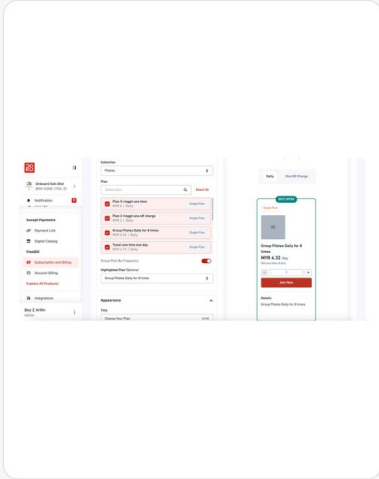
Pick one of six pricing models; set the price and cycle.

3 Coupons



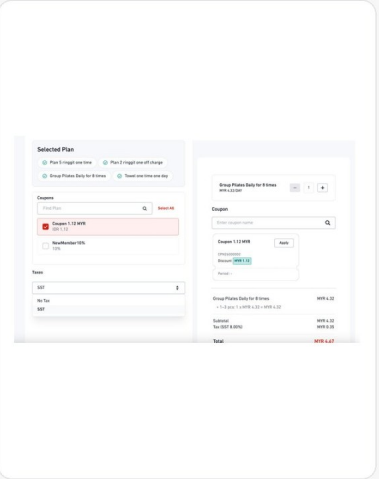
Fixed or percentage, once or every cycle, with dates.

4 Appearance



Up to 10 plans; group by frequency; highlight a best offer.

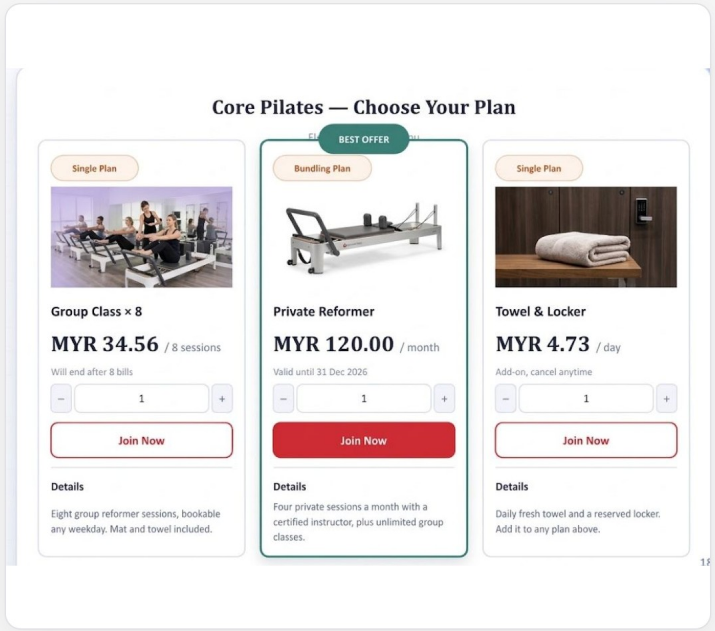
5 Publish



Preview the checkout, then share the link or QR.

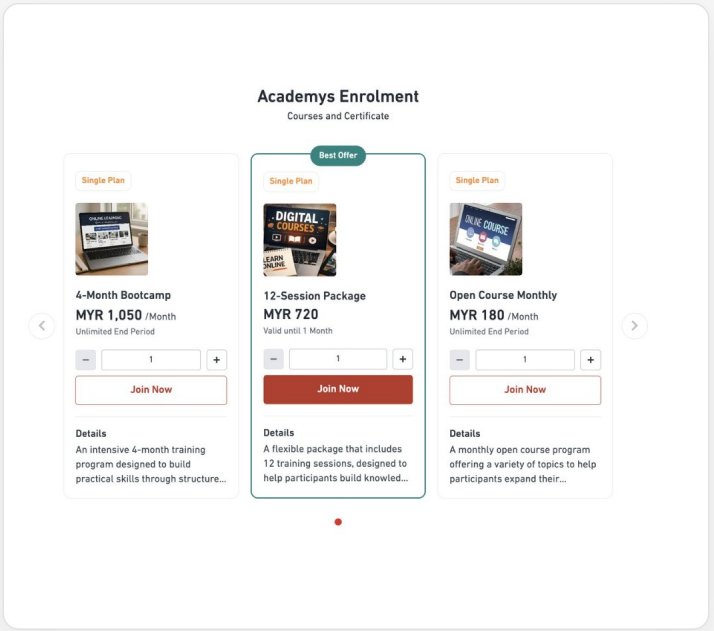
No developer at any step. The checkout creates the subscription and the member record by itself.

Three tables built with the same builder



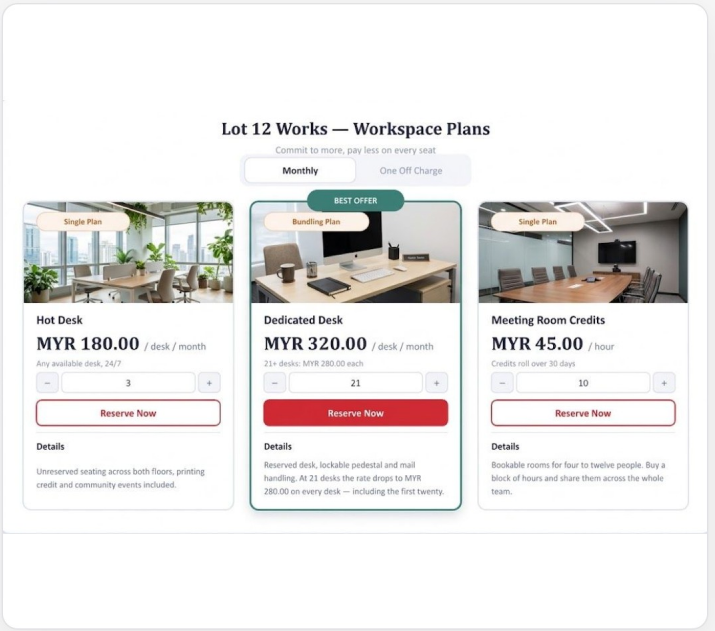
Studio: Core Pilates

Per-session packs and a daily add-on, with a best offer.



Academy: Academys Enrolment

A bootcamp that ends after four cycles, and a one-off package.



Workspace: Lot 12 Works

Per desk and per hour, with a quantity stepper.

Malaysia and Indonesia, side by side

	Malaysia	Indonesia
Amounts	MYR to two decimals: RM 480.00	Whole rupiah: Rp480.000
Entry points	DOKU Checkout; Pricing Table link and QR	DOKU Checkout; Pricing Table, Billing Portal, PayChat on WhatsApp, Group Apps

Paying a bill	FPX online banking, e-wallet or card	Virtual account, QRIS, e-wallet or card
Bills reach customers by	Email invoices, reminders and receipts	WhatsApp through PayChat, email, Billing Portal
Volume	Bulk billing, up to 1,000 rows per upload	TKN_ batch files over SFTP, up to 50,000 rows
Tax	SST, set per Collection	PPN, set per Collection
Proof point	84% unique-bill success rate	65% recovery rate

Six use cases, one structure

Segment A: direct merchants. Segment B: platforms.

A1	Tuition and enrichment centres, private kindergartens and taska	Hybrid	
A2	Gyms, martial arts, dance and swim schools	Hybrid	
B1	School and tuition management systems	API	
B2	Property management software for JMB and MC fees	API	
B3	Season parking platforms	API	Recommended
B4	Co-living and student housing platforms	Hybrid	Recommended

Also on the same engine: courses and academies, co-working, insurance and donation aggregators, SaaS, distributors and resellers, in the FlexiBill Recipe Playbook.

Every module, the same five slides

1. **The story**
   Background, MYR figures, the route
2. **Extreme cases**
   Six edge cases and what handles each
3. **The build**
   API-only or hybrid, step by step
4. **The Pricing Table**
   Or the fee map, for platforms
5. **What changes**
   Before and after, and why start now

Take any module out for an audience; nothing else in the deck depends on its slides.

High-volume, fixed monthly fees, painful collection

A1 Tuition and enrichment centres, private kindergartens and taska

A2 Gyms, martial arts, dance and swim schools

Hundreds of bills on one date
Fees cluster on the 1st, or on each member's join date.

The same fee every month
Fixed amounts make auto-debit natural.

Collection is the hard part
Chasing, matching and failed cards eat the margin.

Typical route: Hybrid, modular first. New customers through DOKU Checkout; current customers through their first FlexiBill bill.

The story: 420 families and the 1st of every month

Cerdik Learning Centre and Tadika Cerdik

Shah Alam, Selangor. Illustrative figures.

Tuition, Standard 1 to Form 5
300 students × RM 220.00 = RM 66,000.00

Tadika, 4 to 6 years
80 children × RM 480.00 = RM 38,400.00

Taska, full day
40 children × RM 750.00 = RM 30,000.00

A month **RM 134,400.00**

Today: bank transfers and QR payments at the front desk, reminders in class chat groups.

Where it hurts today

- Fees cluster on the 1st; transfers trickle in until mid-month.
- Siblings, holidays and add-ons make each month a little different.
- Transfers carry no reference, so matching is manual.
- Expired cards and missed payments surface at the class door.

What FlexiBill brings

- New families enrol on a Pricing Table and pay at DOKU Checkout.
- Card auto-debit on the 1st, retries on the 2nd and 3rd.
- SIBLING10 and freeze coupons apply themselves.
- Billing Summary by programme: who has paid, who is late.

Your route

Build	No-Code	**Hybrid**	API
Scope	**Modular**	Integrated	
Entry	**Checkout**	Token	**No token**

Extreme cases, handled

Two children, two programmes

A tuition student and a tadika child in one family.

Both plans in one checkout; SIBLING10 takes 10% off the second fee every month.

Coupon · Pricing Table

Joining on the 18th

A child starts mid-month.

The joining month is a one-off at the amount you set; the monthly plan starts on the 1st.

One-off plan · DATE 1

December holidays

No classes for a month.

A one-cycle freeze coupon instead of a cancellation; the card token stays for January.

Coupon · Token kept

SPM intensive classes

Extra sessions in exam season, different per student.

A Per Unit add-on at RM 40.00 a session, with the quantity set per student.

Per Unit

Card fails on the 1st

An expired card, or a limit reached.

Retries on the 2nd and 3rd on the same bill, an update link by email, then Confirm Payment.

Retries · Manage Recurring

Parents who never use cards

Some families always pay from the bank.

They pay the emailed bill by FPX online banking or e-wallet; it carries the month, so it matches itself.

Email bill · FPX

The build: hybrid, live from the dashboard

Run it from the dashboard from day one; connect a tuition system only where the centre has one.

1. Create Collections per programme: invoice term 7 days, grace 5 days.
2. Publish the enrolment Pricing Table; new families pay at DOKU Checkout and save a card.
3. Upload current families into Member Center groups by class.
4. Send their first bill on the 25th; paying by card, they can save it.
5. Card auto-debit charges on the 1st and retries on the 2nd and 3rd.
6. Where a tuition system exists, webhooks keep its attendance in step (see B1).

Your route **Hybrid** **Modular** **Checkout** **No token**

Set once: the schedule

```
"executeType": "DATE",
"executeDate": "1;2;3",
"flatStatus": true
// charge on the 1st, retry 2nd and 3rd,
// one bill a month
```

Tax

No SST shown on these fees; tax is set per Collection. Confirm the treatment with your tax advisor.

Built in five steps, in the dashboard

1. **Collection**
   Cerdik 2027: invoice term 7 days, grace 5 days.
2. **Plans**
   Three Flat Fee monthly plans; registration RM 350.00 one-off.
3. **Coupons**
   SIBLING10 every month; EARLYBIRD RM 50.00 off registration.
4. **Appearance**
   Monthly and One-off tabs; Tadika as the best offer.
5. **Publish**
   Link on the website; QR at open day and the front desk.

What changes, and why start before January

	Before	With FlexiBill
Collection day	Chased until mid-month	Collected on the 1st, retried on the 2nd and 3rd
Matching	Screenshots and bank lines	Every payment lands on its own bill
Siblings and holidays	Manual discounts each month	SIBLING10 and freeze coupons run themselves
Failed cards	Found at the class door	Retries, update link, Confirm Payment
Visibility	Ask the admin	Billing Summary by programme, live
Parents' choice	Transfer only	Card auto-debit, FPX online banking or e-wallet

Why start now

The January intake is the moment. Publish the 2027 table in November and every new family starts on auto-debit from day one.

Illustrative impact

RM 134,400.00 is billed a month. If 60% of families move to auto-debit, the playbook's default assumption, RM 80,640.00 arrives on the 1st before any reminder.

Watch

Fees collected by the 5th; share of families on auto-debit.

The story: four disciplines and 1,150 members

Gerak Movement Studios

Petaling Jaya and Subang Jaya. Illustrative figures.

Gym membership
600 × RM 129.00 = RM 77,400.00

Kids' martial arts
200 × RM 160.00 = RM 32,000.00

Dance classes
150 × RM 140.00 = RM 21,000.00

Swim lessons, four a month
200 × RM 180.00 = RM 36,000.00

A month **RM 166,400.00**

Today: gym cards stored at another gateway, kids' classes paid by transfer, class packs at the counter.

Where it hurts today

- Expired cards quietly end memberships.
- Freezes and pauses live on paper forms.
- Kids' term fees are chased in parents' chats.
- Access is checked by hand at the door.

What FlexiBill brings

- A Pricing Table per studio: QR at reception, link in the bio.
- Existing gym cards move into DOKU tokens.
- Webhooks open and close bookings by themselves.
- FREEZE1 before a cancel; COMEBACK20 after Expired.

Your route

Build	No-Code	**Hybrid**	API	
Scope	**Modular**	Integrated		
Entry	**Checkout**	**Token**	No token	

Extreme cases, handled

Injury or travel pause

A member asks to stop for a month.

FREEZE1 for one cycle instead of a cancellation; the member and the token stay.

Coupon · Token kept

Lapsed members

Expired after retries and grace.

The Expired webhook tells your app; send COMEBACK20 and they rejoin through DOKU Checkout.

Webhook · Coupon

Gradings and belt tests

Martial arts gradings at different fees.

A one-off grading plan per level, on the Pricing Table or billed with Generate Bill.

One-off plan · Generate Bill

Recital and competition month

Costume and entry fees for some dancers.

Generate Bill for the dancers taking part, with its own due date; the monthly fee is untouched.

Generate Bill

Members who train everywhere

One member, two studios.

An all-access plan in its own Collection: one token opens every door.

Collection · Token

Corporate wellness

A company pays for 40 staff.

Per Unit seats on one invoice with CORP20; staff join through the company's link.

Per Unit · Coupon

The build: hybrid, with the booking app listening

Members join on the studio's own page or app; FlexiBill and DOKU run every renewal behind it.

1. Create a Collection per studio, plus an all-access Collection.
2. Publish a Pricing Table per studio; new members pay at DOKU Checkout.
3. Move existing gym cards from the old gateway by encrypted export into DOKU tokens.
4. Send kids' parents their first bill; paying by card, they can save it.
5. Charge on each member's join date; retries and update links handle failures.
6. Webhooks open and close bookings in the studio's app.

Your route **Hybrid** Modular Checkout Token

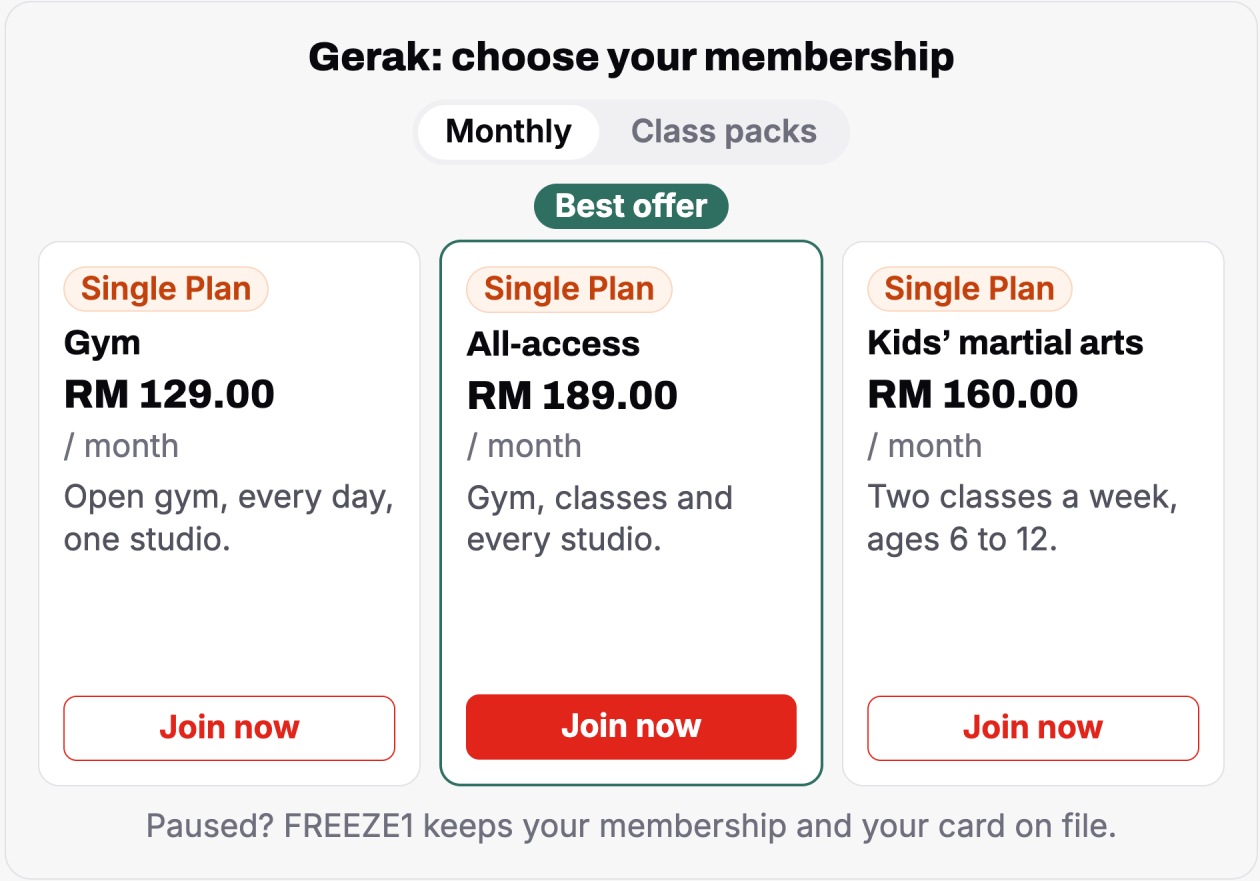
Webhooks to the booking app

```
Activated   // open bookings
Renewed     // extend to next cycle
Expired     // pause, send COMEBACK20
Canceled    // close the membership
```

Tax

SST where it applies, set per Collection. Confirm the treatment with your tax advisor.

The Pricing Table: one per studio, one checkout



Built in five steps, in the dashboard

1. **Collection**
   One per studio, plus All-access; SST where it applies.
2. **Plans**
   Flat Fee memberships; class packs and gradings as one-offs.
3. **Coupons**
   FREEZE1, COMEBACK20 and CORP20.
4. **Appearance**
   Monthly and Class packs tabs; All-access as best offer.
5. **Publish**
   QR at reception, link in the bio, a table per studio.

A2 Gyms, martial arts, dance and swim

Hybrid | Removable module

What changes, and why start in December

	Before	With FlexiBill
Renewals	Cards charged at the desk	Auto-debit on each join date
Expired cards	Members lost quietly	Retries, update link, Confirm Payment
Pauses	Paper forms	FREEZE1, with the token kept
Access	Checked at the door	Webhooks open and close bookings
Corporate	Spreadsheets per company	Per Unit seats on one invoice
Reporting	Per studio, by hand	Billing Summary per Collection

Why start now

January is when members join. Publish the new-year tables in December so every new member starts on auto-debit.

Illustrative impact

RM 77,400.00 a month runs on gym cards. With the ~14% card-lifecycle baseline and half of it recovered, the playbook's default, about RM 5,400.00 a month stays in the business.

Watch

Freezes that return; win-back rate after 30 days.

Platform-led: one integration unlocks many merchants

- **B1** School and tuition management systems
- **B2** Property management software for JMB and MC fees
- **B3** Season parking platforms, recommended
- **B4** Co-living and student housing platforms, recommended

Integrate once
Every school, JMB or operator on the platform can collect.

Keep your interface
Your screens and records stay; DOKU sits behind them.

Grow with your base
Each new customer of yours is a new merchant collecting.

Typical route: API, integrated. Onboarding per merchant (the platform, or each school, JMB or operator) is an item we confirm with counsel.

The story: 85 schools and 21,000 students on one platform

SekolahHub school management platform

Used across Peninsular Malaysia.
Illustrative figures.

Institutions on the platform
85 private schools, tadika and tuition centres

Students billed
21,000 a month

Average monthly fee
RM 260.00

Billed a month **RM 5,460,000.00**

Today: each school collects on its own, by transfer and cash; the platform only records what admins type in.

Where it hurts today

- Every school chases its own fees; the platform sees only what admins key in.
- Payment status lags attendance and report cards by weeks.
- Schools ask for online payment; building it means a licence, a gateway and an engine.
- Each school has its own fee items, sibling rules and term dates.

What FlexiBill brings

- One integration: every school on the platform can collect.
- Registration from the platform; DOKU Checkout saves the parent's card.
- Webhooks write paid status straight into the student record.
- Generate Bill for anything that varies: trips, books, exam fees.

Your route

Build	No-Code	Hybrid	**API**
Scope	Modular	**Integrated**	
Entry	**Checkout**	Token	**No token**

Extreme cases, handled

A school joins mid-term

Its fees are already set for the term.

The platform creates its Collection and plans from the fee template; parents get their first bill on the next billing date.

Collection template · API

Second child, same school

Siblings get 10% off.

The platform passes SIBLING10 in Create Subscription; the discount applies every cycle.

Coupon · Create Subscription

Bursary students

Some pay half, some nothing.

A recurring BURSARY50 coupon per student; a full scholarship is simply not billed.

Coupon

Trips, books and exam fees

Charges that differ per student.

Generate Bill from the platform, with its own amount and due date; the monthly fee is untouched.

Generate Bill

Parents who prefer the bank

No card on file.

They pay each emailed bill by FPX online banking or e-wallet; the webhook marks the student paid.

Email bill · Webhook

A failed charge before exams

The school wants status, not calls.

Retries on the 6th and 7th, then an update link; the platform shows payment pending from the webhook.

Retries · Webhook

The build: API-only, one integration for every school

The platform keeps its screens and student records; FlexiBill and DOKU work behind them through the API.

1. Map each school's fee items to a Collection template: plans, coupons, tax.
2. Onboard each school; the per-school model is confirmed with counsel.
3. At enrolment the platform sends the registration; the paymentLink opens DOKU Checkout.
4. Current parents get their first bill by Generate Bill; paying by card, they can save it.
5. Webhooks write Activated, Renewed, Expired and Canceled into the student record.
6. School admins handle exceptions in Manage Recurring, without a developer.

Your route **API** **Integrated** **Checkout** **No token**

Registration at enrolment

```
POST /ab-core-api/v1/billing-registration
{ "recurring": {
    "billNumber": "SKH-0412-2027",
    "executeType": "DATE",
    "executeDate": "5;6;7" } }
// paymentLink opens DOKU Checkout
```

For counsel

The per-school onboarding model: who the merchant is, and how each school is onboarded and settled.

The fee map: one template, every school

Item	Example (MYR)	In FlexiBill	When
Monthly fee	RM 260.00	Flat Fee plan	DATE 5
Registration	RM 300.00	One-off plan	Enrolment
Second child	10% off	SIBLING10	Every cycle
Bursary	50% off	BURSARY50	Every cycle
School bus	RM 120.00	Flat Fee add-on	DATE 5
Trips and exams	Varies	Generate Bill	As needed
Tax	As advised	Tax setting	Set once

Where a Pricing Table still helps

Open days and holiday camps: a school publishes its own Pricing Table for registrations, with no platform release.

Integration path

1. Sandbox: map one school's fees and run a test cycle.
2. Pilot: three schools on one billing date.
3. Roll out to every school, in batches.

What changes for the platform, and why now

	Before	With FlexiBill
Schools	Chase their own fees	Collected on the date, retried, reported
Parents	Transfer, then send a receipt	Card auto-debit, FPX online banking or e-wallet
The platform	Records what admins type	Paid status written by webhook
Payments build	A licence, a gateway and an engine	One integration with DOKU
Variable charges	Separate invoices by hand	Generate Bill from the platform
New schools	Weeks of setup	A Collection template and a test cycle

Why start now

Schools choose their tools before the January term. A platform that collects for them by then is the one they keep.

Illustrative impact

RM 5,460,000.00 a month is billed by the platform's schools. If 60% of parents move to auto-debit, the playbook's default, RM 3,276,000.00 arrives on the billing date.

Watch

Schools live; share of parents on auto-debit; days from due date to cash.

For counsel: the per-school onboarding model.

The story: 60 developments and 18,000 units

StrataOne property software

Klang Valley and Penang. Illustrative figures.

Developments on the software
60 JMB and MC developments

Units billed
18,000 a month

Service charge, average unit
1,000 sq ft × RM 0.30 = RM 300.00

Sinking fund, 10% of the charge
RM 30.00 a unit

Billed a month **RM 5,940,000.00**

Today: transfers and cheques at the management office; arrears tracked per block in spreadsheets.

Where it hurts today

- Arrears build quietly until the AGM.
- Transfers arrive with unit numbers typed five ways.
- Owners and tenants pay for different things.
- Each JMB or MC keeps its own accounts, apart from the managing agent.

What FlexiBill brings

- One integration: every development on the software collects.
- Per Unit pricing by square foot; the sinking fund as its own plan.
- Card auto-debit on the 1st; FPX online banking for the rest.
- Arrears by block, live, from webhooks into the software.

Your route

Build	No-Code	Hybrid	**API**
Scope	Modular	**Integrated**	
Entry	**Checkout**	Token	**No token**

Extreme cases, handled

Different unit sizes

850 to 2,400 sq ft in one development.

One Per Unit plan at RM 0.30 a sq ft; the quantity is the unit's size, so one plan bills every unit.

Per Unit

Sinking fund kept apart

Owners and auditors want it shown separately.

The sinking fund is its own plan on the same bill, so every payment shows the split.

Plan Rulebook

Owner and tenant

The tenant pays the car park; the owner pays the charge.

Separate groups in Member Center; each receives only their own bills.

Member Center

Late payment interest

Arrears past the due date.

Generate Bill for the interest your by-laws allow, with its own due date.

Generate Bill

Water by meter

Amounts change every month.

An Open Amount plan, or Generate Bill with the reading from the software.

Open Amount Generate Bill

A unit changes hands

The new owner takes over mid-year.

Cancel the old owner's subscription and register the new owner, who saves a card at DOKU Checkout.

Canceled webhook Door A

The build: API-only, inside the software

Committees and managing agents keep the software they know; FlexiBill and DOKU collect behind it.

1. A Collection per development: invoice term 14 days, tax as advised.
2. Price the charge Per Unit by square foot; add sinking fund, car park and water plans.
3. Onboard each JMB or MC as its own merchant; fund settlement is confirmed with counsel.
4. Owners register in the software and save a card at DOKU Checkout.
5. Owners who prefer the bank get an emailed bill to pay by FPX online banking.
6. Webhooks update arrears by block for the committee.

Your route **API** **Integrated** **Checkout** **No token**

One plan bills every unit

```
POST /subscription-core/v1/subscription
{ "collection_code": "SERIMAJU2027",
  "plans": [
  { "plan_code": "SERVICE", "qty": 1180 },
  { "plan_code": "SINKING", "qty": 1180 }] }
// qty = the unit's square feet
// RM 0.30 and RM 0.03 a sq ft
```

For counsel

JMB and MC fund settlement: how charges and sinking funds settle to each body's own accounts.

The fee map: one development, every unit

Item	Example (MYR)	In FlexiBill	When
Service charge	RM 0.30 a sq ft	Per Unit plan	DATE 1
Sinking fund	RM 0.03 a sq ft	Per Unit plan	DATE 1
Second car park bay	RM 50.00	Flat Fee plan	DATE 1
Water	Metered	Open Amount plan	Monthly
Late payment interest	Per your by-laws	Generate Bill	As needed
Access cards	RM 30.00 each	One-off plan	On request
Tax	As advised	Tax setting	Set once

Where a Pricing Table still helps

Facilities and new owners: a Pricing Table per block for the function hall, gym access or a second bay.

Integration path

1. Sandbox: one development, one billing date.
2. Pilot: three developments through a full cycle.
3. Roll out in batches of developments.

What changes for the software, and why now

	Before	With FlexiBill
Committees	Arrears seen at the AGM	Arrears by block, live
Owners	Transfer, then send proof	Card auto-debit or FPX online banking
Matching	Unit numbers typed five ways	Every payment on its own bill
Sinking fund	Split in spreadsheets	Its own plan, on every bill
Variable charges	Separate invoices	Generate Bill from the software
The software	Records what offices type	Paid status by webhook

Why start now

Charges for the new financial year are set at the AGM. Software that collects from the first bill of the year is an easy yes.

Illustrative impact

RM 5,940,000.00 a month is billed across the developments. If 60% of units move to auto-debit, the playbook's default, RM 3,564,000.00 arrives on the 1st.

Watch

Arrears by block; share of units on auto-debit.

For counsel: JMB and MC fund settlement.

The story: 40 car parks and 12,000 season passes

ParkLane season parking platform

Kuala Lumpur and Selangor. Illustrative figures.

Car parks on the platform
40 operators and buildings

Season passes
12,000 a month

Average pass
RM 150.00 + SST 6% = RM 159.00

A month, with SST **RM 1,908,000.00**

Today: renewals at the office counter or by transfer; access cards switched off by hand when unpaid.

Where it hurts today

- Renewals queue at the counter in the last week of the month.
- Unpaid passes keep opening barriers for days.
- Company fleets pay for dozens of bays on one invoice, by hand.
- Each car park has its own prices and tax set-up.

What FlexiBill brings

- Passes renew by card auto-debit on the 1st.
- Webhooks switch access cards on and off the same day.
- Per Unit bays for companies, on one bill.
- A Collection per car park, priced its own way.

Your route

Build	No-Code	Hybrid	**API**
Scope	Modular	**Integrated**	
Entry	**Checkout**	Token	**No token**

Extreme cases, handled

A charge fails on the 1st

The card expired over the weekend.

Retries on the 2nd and 3rd; the access card stays on through the grace period you set.

Retries · Grace period

A company fleet

30 bays for one company.

A Per Unit plan with 30 as the quantity: one invoice, with the bays listed in your system.

Per Unit

A change of car

A new number plate mid-month.

The platform updates its own record; the subscription and the token stay as they are.

Your records · Token kept

Reserved and floating bays

Two prices in one building.

Two plans in the car park's Collection; drivers choose on the platform.

Plans

A one-week stay

A visitor needs a week, not a month.

A one-off weekly pass, paid at DOKU Checkout; nothing renews.

One-off plan · Door A

New rates at one site

One building raises its rates.

A new plan in that car park's Collection; every other site is untouched.

Collection per site

The build: API-only, access in step with payment

Drivers keep the platform's app; FlexiBill bills, DOKU collects, and webhooks drive the barrier.

1. A Collection per car park, with SST at the rate that applies.
2. Plans for reserved, floating and weekly passes; Per Unit bays for companies.
3. The app registers the driver; the paymentLink opens DOKU Checkout.
4. Activated switches the access card on; Expired after grace switches it off.
5. Companies get one invoice for their bays by Generate Bill.
6. Operators see paid, due and overdue passes in their Billing Summary.

Your route **API** **Integrated** **Checkout** **No token**

Webhooks to the barrier

```
Activated   // card on, pass starts
Renewed     // pass extended
Expired     // card off after grace
Canceled    // pass closed
```

Tax

SST 6% on parking, shown for illustration and set per Collection. Confirm the treatment with your tax advisor.

5. **Publish**
   QR at the entrance and lift lobby; link in the app.

What changes for the platform, and why now

	Before	With FlexiBill
Renewals	Queues at the counter	Auto-debit on the 1st
Unpaid passes	Barriers open for days	Access follows the webhook
Fleets	Invoices by hand	Per Unit bays on one bill
Tax	Worked out per site	Set per Collection
Operators	Wait for reports	Billing Summary, live
Drivers	Pay at the office	Card, FPX online banking or e-wallet

Why start now

Every building the platform signs can collect from its first month, with no counter and no cash.

Illustrative impact

RM 1,908,000.00 a month is billed across the car parks. If 60% of passes move to auto-debit, the playbook's default, RM 1,144,800.00 arrives on the 1st.

Watch

Passes renewed by the 3rd; access closed on the day a pass expires.

The story: 25 buildings and 2,400 rooms

Rumah Bersama co-living platform

Setapak, Cyberjaya and Penang.
Illustrative figures.

Buildings on the platform
25 co-living and student buildings

Rooms let
2,400 a month

Average room
RM 950.00 a month

Utilities, metered
RM 60.00 to RM 120.00 a room

Rent a month **RM 2,280,000.00**

Today: rent by transfer, utilities split in spreadsheets, deposits tracked by hand.

Where it hurts today

- Rent arrives late in the first week, every month.
- Utilities change monthly and are split by hand.
- Tenants leave mid-semester; final sums are worked out by hand.
- Each operator banks separately; the platform reconciles for all.

What FlexiBill brings

- Rent by card auto-debit on the 1st, from move-in.
- Utilities billed by Generate Bill from meter readings.
- A Pricing Table per building for rooms and add-ons.
- One record per tenant across rent, utilities and add-ons.

Your route

Build	No-Code	**Hybrid**	API
Scope	Modular	**Integrated**	
Entry	**Checkout**	Token	**No token**

Extreme cases, handled

Deposit and first month

Two months' deposit at move-in.

A one-off deposit plan and the first month in one DOKU Checkout; the card is saved for the rent.

One-off plan · Door A

Moving in on the 20th

Rent is due on the 1st.

A one-off for the part-month at the amount you set; the monthly plan starts on the 1st.

One-off plan · DATE 1

Utilities that change monthly

Air-conditioning and water by meter.

Generate Bill with the meter amount, its own due date and the same pay button.

Generate Bill

Semester break

Students away for two months.

A freeze coupon for the months away, where the operator allows it; the token stays for the new semester.

Coupon · Token kept

Leaving early

A tenant ends the lease mid-term.

Cancel the subscription; the final utilities and charges go out by Generate Bill.

Canceled webhook · Generate Bill

Two tenants, one room

Two students share a room.

Two subscriptions, each at its share of the rent, each with its own card.

Two subscriptions

The build: hybrid, the app and the dashboard together

Tenants sign up in the platform's app; operators run the month in the dashboard.

1. A Collection per building: rooms, deposits and add-ons as plans.
2. At move-in the app registers the tenant; deposit and first month are paid at DOKU Checkout.
3. Rent charges on the 1st by card auto-debit, with retries on the 2nd and 3rd.
4. Utilities go out monthly by Generate Bill from the meter readings.
5. Viewings book a room from the building's Pricing Table QR.
6. Webhooks update the tenant record; operators handle exceptions in Manage Recurring.

Your route **Hybrid** **Integrated** **Checkout** **No token**

Utilities, by meter

```
POST /bill-collection-core/v1/generate/invoice
{ "bill_identifier": "RB-0412-UTIL-2701",
  "amount": 86.40 }
// due in 7 days, with a pay button
```

Tax

No SST shown on residential rent; tax is set per Collection. Confirm the treatment with your tax advisor.

50,000
rows in one TKN_ batch, Indonesia

Live in four steps

1

Agree the route

Build, scope and entry for each line of business; plans and dates mapped together.

2

Activate

Your account and payment methods. Card auto-debit is requested, reviewed, then switched on.

3

Configure and connect

Collections, plans, coupons and the Pricing Table; registration and webhooks for Hybrid or API.

4

Run the first cycle

A small batch first, then everyone; failures watched in Manage Recurring.

Items we confirm with counsel and advisors before go-live

- JMB and MC fund settlement (B2)
- The per-school onboarding model for platforms (B1)
- Auto-debit consent wording on checkout pages and bills
- Tax treatment per Collection, with your tax advisor

Reasons to start this month

Nothing to rebuild

Your website, app or platform stays in front; DOKU Checkout sits behind it.

Live in days

Start no-code in the dashboard; connect the API when you are ready.

Bring everyone

New customers at DOKU Checkout; existing ones with or without a token.

Your calendar

Charge on your date, retry on the next ones, one bill a month.

Numbers to point to

84% unique-bill success in Malaysia; 65% recovery in Indonesia.

Intakes are coming

January terms, new-year memberships and February move-ins can start on auto-debit.

Pick one line of business and one door. We set up the first Collection with you and run a sandbox cycle this month.

FlexiBill

Point of view for Malaysia and Indonesia

Your interface in front. Every cycle collected.

Build with no code, by API, or both. Take one module or the whole engine. Start new customers at DOKU Checkout, and bring the ones you already bill, with or without a token.

How you build
