DOKU · FLEXIBILL · PRODUCT CAPABILITIES MAP

All the billing you can handle.

360° collection for businesses that bill the same customers again and again: one engine from the first “yes” to the last rupiah or ringgit collected.

Subscription & Billing | Account Billing | Member Center | Billing Portal | PayChat

Indonesia + Malaysia · September 2026 edition

Built on DOKU’s published FlexiBill, Account Billing, Billing Portal and PayChat documentation

POSITIONING

The billing platform merchants dream about.

01	**360° collection**	Subscribe, bill, present, collect, recover and reconcile on one engine, running on DOKU's own payment rails.
02	**All the billing you can handle**	Six pricing models, coupons and tax, one-off and recurring, interval and calendar schedules, bulk files, API and SFTP.
03	**Two collection engines, one customer**	An invoice with a payment link, or silent auto-debit, on the same subscription; the customer can switch auto-debit on.
04	**A billing portal they configure themselves**	Branded, no-code, published live, inside DOKU e-Wallet's group-app model. Indonesia only.
05	**PayChat reach, in real time**	Sign-ups, bills, reminders and receipts over official WhatsApp, the thread customers already answer. Indonesia only.

HOW TO USE THIS DECK

Slice it to fit the meeting.

Eight self-contained modules. Pull one for a first call, or run the full map for a product team.

01 · SLIDES 4–6

Capability map

Any first meeting: what exists, and where it runs

02 · SLIDES 7–10

Engine A · Billing Recurring

Auto-debit for insurers, SaaS and memberships

03 · SLIDES 11–16

Engine B · Billing Automation

Plans, pricing, coupons, API and webhooks

04 · SLIDES 17–19

Presentment 360

Email, WhatsApp, portal and pricing table

05 · SLIDES 20–24

Build modes

No-code, API or orchestration, and who changes what

06 · SLIDES 25–27

Roadmap, available today

Trial, calendar, prorate and more, without waiting

07 · SLIDES 28–31

Use cases

Education, fitness, school platforms and strata

08 · SLIDES 32–33

Landscape

Benchmark, and the one thing to lead with

CAPABILITY MAP

One engine, seven moments, every capability.

Live in Indonesia and Malaysia unless marked · ID = Indonesia only · MY Q4 = Malaysia, Q4 2026

Enrol

- Member Center registry

- 8 webhooks
- Send One Bill/Month
- Sandbox to production

REACH IT THROUGH Dashboard (no-code) · Bulk file · Host-to-host API · SFTP · Webhooks · PayChat · Billing Portal

TWO ENGINES

One engine, or both on the same customer.

	A · Billing Recurring (Account Billing)	B · Billing Automation (Subscription & Billing)
Customer action	Registers a card or bank account once; every later charge is silent	Pays each invoice by link, or switches on auto-debit from the invoice
Schedule	Calendar dates per customer, e.g. the 5th, with the 6th and 7th as retries	Interval from the start date, or a specific date (Malaysia: Q4 2026)
Methods	Card SALE + RECURRING or MOTO; direct debit in Indonesia	Every payment method enabled on the DOKU account
Touch points	API · dashboard · SFTP with the Merchant Hosted Scheduler (Indonesia)	Dashboard · bulk file · Pricing Table · host-to-host API
Best for	Insurance, SaaS, memberships, metered utilities	Tuition, rent, clubs, ISP, B2B invoices

Run both on one customer. Subscription & Billing owns the plan, the price and the invoice; Account Billing charges the stored credential; the invoice is marked Paid automatically.

AVAILABILITY

What runs where, stated plainly.

Capability	Indonesia	Malaysia	Note
Subscription & Billing: plans, six pricing models, coupons, tax	Live	Live	IDR whole numbers · MYR up to 2 decimals
Bulk bill upload (1,000 rows), Pricing Table, Member Center	Live	Live	Mix plan-based and file-based billing
Host-to-host API (Generate Bill, Create Subscription) + webhooks	Live	Live	Currency must match the business country
Specific-date (calendar) billing	Live	Q4 2026	Malaysia today: anchor the start date
Native proration	Dec 2026	Q4 2026	The coupon recipe works today in both
Account Billing · DOKU Hosted Scheduler	Live	Live	Card SALE + RECURRING or MOTO
Account Billing · Merchant Hosted Scheduler + SFTP	Live	Not offered	Indonesian business accounts only
Direct debit auto-debit (Mandiri, CIMB, Allo Bank)	Live	Not offered	Malaysian recurring runs on cards
PayChat: Bill Broadcast, Accept Order, WhatsApp Subscription	Live	Not offered	Never demo it to a Malaysian merchant
Billing Portal inside DOKU e-Wallet	Live	Not offered	Malaysian self-service: the payment link
Malaysia localisation package	—	H1 2027	Stage 2 of the roadmap

ENGINE A · BILLING RECURRING

Two scheduler models, one auto-debit engine.

ID + MY

DOKU Hosted Scheduler

Set it once. DOKU runs the clock.

1. Customer registers a card or account once
2. DOKU tokenises it (PCI-DSS)
3. Charges run on calendar dates you assign
4. Real-time registration and payment callbacks

Fits: real-time online sign-ups, SaaS, gyms, insurers without a billing engine

API Dashboard

Indonesia only

Merchant Hosted Scheduler

You own the clock. DOKU executes the charge.

1. First payment → Get Token List API
2. Build TKN_ file: token, amount, execute date
3. Encrypt, upload to SFTP, optional Trigger API
4. DOKU charges the batch, record by record
5. Report in SFTP + DONE notification

Fits: mature policy systems, unit-linked products, metered utilities

API Dashboard SFTP

ENGINE A · REGISTRATION API V2 · READY OCTOBER 2026

One call: customer, schedule and first payment.

Merchant	**1.** POST billing-registration with customer, order and recurring rules
DOKU	**2.** Returns a paymentLink to DOKU checkout
Customer	**3.** Pays the first bill, or a Rp10,000 check that is refunded at once
DOKU	**4.** Vaults the token; card data never reaches the merchant
Scheduler	**5.** Fires on each executeDate inside the start–end window
DOKU	**6.** flatStatus false: asks the merchant for this cycle's amount, then charges and notifies

```
"recurring": {
  "billNumber": "0212540000",
  "executeType": "DATE",
  "executeDate": "01,06,14,21,28",
  "executeMonth": "JAN,FEB,…,DEC",
  "flatStatus": true
}
```

useOrderAmount — true: first real payment · false: Rp10,000 verification, refunded

flatStatus — true: fixed amount · false: amount from your inquiry each cycle

executeType — DATE: days of the month · DAY: weekdays · FULLDATE: one date

ENGINE A · RECOVERY TOOLKIT

Turn every failed charge into a managed event.

Multi-date retry

Give one customer the 5th, 6th and 7th; a failed charge retries on the next date.

Send One Bill/Month

The first success wins; later attempts return ALREADY_PAID, never a double charge.

URL Amount

DOKU asks your endpoint for this cycle's amount just before charging: usage-based auto-debit.

Freeze the Card

Skips cards flagged stolen, frozen or restricted, so repeat failures cost nothing.

Update Source of Fund

A hosted link scoped to one bill; the customer re-registers a card and charging resumes.

Confirm Payment

Charge the current cycle now, outside the schedule, the moment funds are back.

Execution preferences

Set the execution time window, duplicate protection and fraud filtering once.

Real-time callbacks

Registration and payment results post to your notification URL as they happen.

ENGINE A · TWO POINTS OF VIEW

Account Billing, through two pairs of eyes.

	SET UP	REGISTER	EVERY CYCLE	WHEN A CHARGE FAILS
Merchant	Activate card (SALE + RECURRING or MOTO) or direct debit, pick a scheduler, set execution preferences.	Register customers by API, dashboard or SFTP; one customer can hold several billing lines.	Watch the success rate and failed charges in Manage Recurring, in real time.	Retry on the next date, press Confirm Payment, or send an Update Source of Fund link.
Customer	Nothing to install and nothing to remember.	Pays once in DOKU checkout; the card or bank account is tokenised; gets a confirmation.	Charged automatically, with a notification after each success.	Opens a hosted link, updates the card in a minute, and the service carries on.

Merchant effort sits at set-up; customer effort sits at registration. After that, both only ever see exceptions.

ENGINE B · BILLING AUTOMATION

The billing logic engine, in four objects.

01 · COLLECTION

The container

Invoice term, grace period, tax and coupons for every plan inside it.

→

02 · PLAN

The offer

Pricing model, recurring or one-off, cycle, duration, stock and plan image.

→

03 · SUBSCRIPTION

The customer on the offer

A member on up to 10 plans with one cycle, a start date, an end rule, coupon and tax.

→

04 · INVOICE

The bill, every cycle

Issued automatically with a unique payment link, delivered by email or WhatsApp, tracked.

Cycles

Daily, weekly, every 2 weeks, monthly, quarterly, half-yearly, yearly, or a specific date. Ends after N bills, on a date, or never.

Terms

Invoice term: due on receipt, N days, or end of month. Grace period up to 90 days. Overdue, then Expired.

Two ways in

Subscriptions for plan-based lifecycle control, or Bulk Bill Upload at 1,000 rows per file with no plan set-up.

ENGINE B · PRICING

Six ways to price, coupons and tax on top.

Flat Fee

One price every cycle.

IDR 500,000 monthly tuition

Per Unit

Price × quantity.

IDR 20,000 per seat, or strata share units

Tiered

Each band at its own rate.

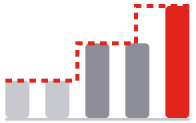

8 programmes = 5 × 15k + 3 × 13k = IDR 114,000

Volume

Total quantity sets one rate.

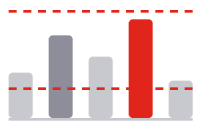

Buy 8 and all 8 cost IDR 15,000

Stairstep

A flat price per bracket.

1–10 members IDR 100k · 11–20 IDR 180k

Open Amount

Set per customer, inside guardrails.

Desk rental IDR 1–5 M, fixed at sign-up

Price Preview calculator · **Coupons and tax on every model** · **IDR whole numbers · MYR 2 decimals** · **Bulk file: a fixed amount per row**

ENGINE B · COUPON ENGINE

The coupon engine is a programmable lever.

Six dials on every coupon

TYPE	Flat amount or a percentage
STOCK	Total redemptions, consumed at enrolment only
CYCLES	Every invoice, or a set number of cycles
WHO	All members, or one specific member
SCOPE	The whole invoice, or selected plans only
WINDOW	Start and end dates for new redemptions

WHAT IT UNLOCKS TODAY

Free trial
100% off, limited to 1 cycle, on the Pricing Table

Proration
Member-specific flat coupon worth the unused days, 1 cycle

Win-back
Member-specific % off for 3 cycles, sent after Expired

Early bird
A validity window plus stock of 50, first come first served

Sibling discount
15% off the tuition plan only, via selected items

Loyalty month
100% off for one member, 1 cycle

CALCULATION ORDER Plan price × qty → − coupon → = subtotal → + tax → = total

ENGINE B · HOST-TO-HOST API AND WEBHOOKS

The programmable surface: call, then listen.

CALL · 5 ENDPOINTS

POST `/bill-collection-core/v1/generate/invoice`

One-time or recurring, any amount, email or WhatsApp, no plan needed

POST `/subscription-core/v1/subscription`

Customer on a dashboard collection, up to 10 plans, coupon and tax

POST `/ab-core-api/v1/billing-registration`

Account Billing V2: payment link plus schedule · October 2026

POST `/batch-upload/v1/notify`

Run an SFTP batch now · Merchant Hosted Scheduler, Indonesia

API `PayChat Send Message`

WhatsApp message with a payment link · Indonesia

LISTEN · 8 WEBHOOKS

- Activated
- Renewed
- Expired
- Canceled
- Renewal Reminder · H-3
- Payment Due Reminder
- Accept Order · Inquiry
- Accept Order · Paid

Invoice delivery states

INVOICE_IN_PROCESS → CREATED → SENT, or ERROR when the deposit is low; top up and it retries itself.

Every call is signed

Client-Id · Request-Id · Request-Timestamp · Signature (HMAC-SHA256). Sandbox and production credentials differ; bill_identifier is the idempotency key.

ENGINE B · LIFECYCLE

A subscription's life, one event per turn.

EVERY CYCLE, WHEN THE CUSTOMER PAYS

Registered
By admin, file, API or Pricing Table
Created

→

Active
First payment received
Activated

→

Reminded
3 days before the bill; can still cancel
Renewal Reminder

→

Invoiced
New invoice, new payment link
Invoice Sent

→

Paid
Cycle secured; the loop repeats
Renewed

WHEN THE INVOICE IS NOT PAID

Unpaid
Invoice delivered, not yet paid
UNPAID

→

Nudged
Before the due date or grace end
Payment Due Reminder

→

Overdue
Due date passed; service stays on
OVERDUE

→

Grace
Up to 90 days, no penalty
Grace period

→

Expired
Grace ended unpaid; service stops
Expired

Automate: Renewed → extend access · Due reminder → WhatsApp nudge · Expired → win-back coupon · Canceled → stop access

ENGINE B · TWO POINTS OF VIEW

Billing Automation, through two pairs of eyes.

	SET UP	ENROL	EVERY CYCLE	LATE PAYMENT
Merchant	Create the collection, plans, coupons and tax; brand the invoice with a template, logo, colours and signature.	Subscribe members by hand, by bulk file or by API, or let the Pricing Table enrol them.	Invoices issue and deliver themselves; Billing Summary shows expected, received, outstanding and overdue.	Filter overdue bills, remind by WhatsApp, rely on the grace period, or re-bill.
Customer	Nothing to install.	Picks a plan, verifies email by OTP, pays the first bill and can switch on auto-debit.	Gets the invoice by email or WhatsApp with a fresh payment link, and pays any way.	Is reminded before the due date, pays inside the grace period, and service stays on.

The merchant configures once and watches one number; the customer receives one bill, with one link, wherever they already read.

PRESENTMENT 360

The bill travels to wherever the customer already is.

Email invoice and receipt
ID + MY · Branded with 4 templates, logo, colours and signature

WhatsApp Bill Broadcast
Indonesia · Approved templates, scheduled, read-tracked

WhatsApp sign-up
Indonesia · Accept Order registers; FlexiBill bills every cycle

FLEXIBILL

One bill.

One status and one payment link per cycle, whichever surface the customer uses.

Invoice · Reminder · Receipt

Billing Portal
Indonesia · Inside DOKU e-Wallet: log in, see bills, pay

Pricing Table
ID + MY · Share a link or embed it; plans, coupons, email OTP

Dashboard and webhooks
ID + MY · Your team and your systems see the same status

Paid in WhatsApp shows as paid on the dashboard, in the portal and in your webhook, because every surface reads the same bill.

PRESENTMENT 360 · PAYCHAT × FLEXIBILL · INDONESIA

WhatsApp as front door and collection desk.

Accept Order

The sign-up and order desk

- ✓ Bot flow with up to 10 custom questions
- ✓ Price Reference (10 tiers), custom, flat or merchant-set amounts
- ✓ Auto-confirm, or approve each order
- ✓ Inquiry and paid webhooks to your system

WhatsApp Subscription

Orchestration, ready-made

- ✓ Accept Order registers the customer
- ✓ Generate Bill (RECURRING) runs every cycle
- ✓ Daily, weekly, monthly, quarterly or yearly
- ✓ Name, phone and email filled from WhatsApp

Bill Broadcast

The reminder engine

- ✓ Approved templates with name, invoice and amount variables
- ✓ Upload a list or send by API
- ✓ Send now or schedule
- ✓ Delivery, read and failure tracking

PRESENTMENT 360 · BILLING PORTAL · INDONESIA

A billing app the merchant configures alone.

Self-configurable, customisable, live in real time, on the DOKU e-Wallet group-app model.

Self-configurable

Display name, logo, primary and secondary colours, font and legal PDFs, all from the dashboard.

Customisable

Up to 3 of 5 homepage sections: a Widget for billing quick access, a Banner for news and promotions.

Live in real time

Members' homepage reflects each change once applied; changes can be applied every 10 minutes.

Group-app model

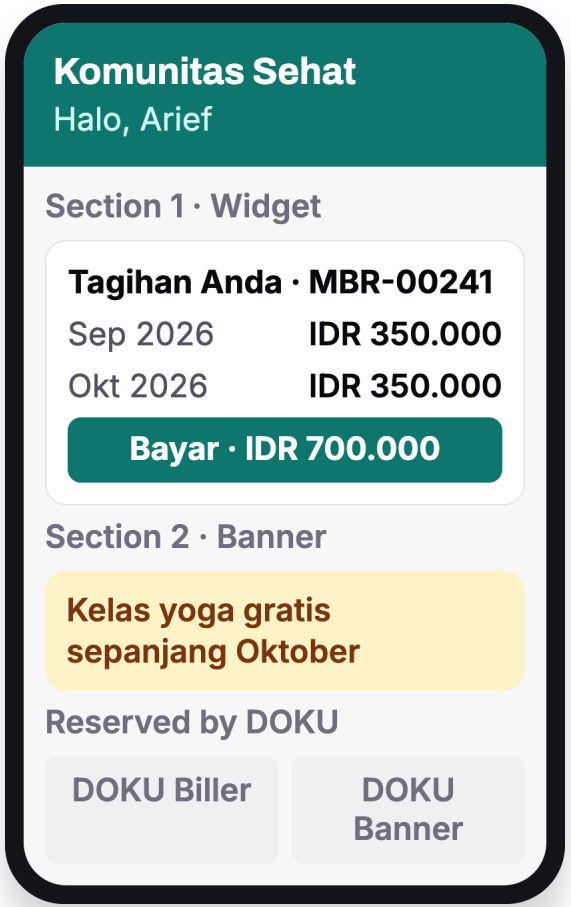

Runs inside DOKU e-Wallet's Billing Presentment, beside the reserved DOKU Biller and DOKU Banner slots.

Archive and restore

Removed sections and their content are kept, and restore when a slot is free.

Pay any way

DOKU Wallet with a PIN, virtual account, QRIS or cards; the oldest bill is paid first.

BUILD MODES

Three ways to build on the same engine.

Start no-code, integrate when ready, orchestrate when the pricing gets clever. Nothing re-platforms.

No-code

Configure and operate from the dashboard

WHO RUNS IT

Owners, admins and finance teams

TOOLS

Plans & coupons · Member Center · Pricing Table · Bulk upload

WATCH-OUT

1,000 rows per file; plan changes are made by hand.

API

Your system triggers, FlexiBill executes

WHO RUNS IT

Product and backend teams

TOOLS

Generate Bill · Create Subscription · Registration V2 · Webhooks

WATCH-OUT

The catalogue still lives in the dashboard; there is no cancel endpoint.

Orchestration

Dashboard rules, API triggers, webhook reactions

WHO RUNS IT

Operations plus one light backend

TOOLS

Dashboard rules · A few API calls · 1 webhook listener · PayChat

WATCH-OUT

Keep one system of record per field, and write down which side owns it.

BEST-FIT CRITERIA

Read the transaction profile, then pick the mode.

Criterion	No-code	API	Hybrid · orchestration
Volume per cycle	Tens to a few thousand; 1,000 rows per upload	Any volume, triggered by events	Any volume
Pricing shape	Fixed plans, tiers, coupons	Computed each cycle: usage, seats	Fixed plans plus variable add-ons and adjustments
System of record	FlexiBill Member Center	Merchant app, ERP or policy system	Both, kept in sync by webhooks
Enrolment	Pricing Table, admin, WhatsApp (ID)	Inside the merchant's own app	App, Pricing Table and WhatsApp together
Change frequency	Low: plans rarely change	High: amounts change every cycle	Medium to high
Team	No developers	A backend team	One developer for a webhook listener
Typical merchants	Tuition, gyms, kos, clubs	SaaS, ISP portals, insurers with a PAS	Schools with add-ons, platforms, insurers with riders

IMPACT ON THE MERCHANT · NO-CODE

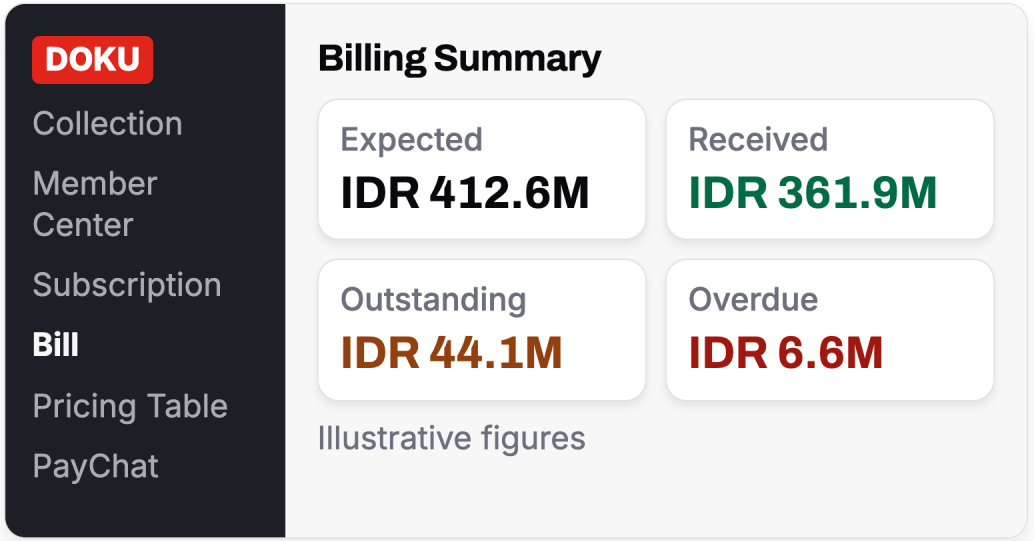

No-code: what changes in the merchant's day.

Today

- ⚠ Duplicate last month's spreadsheet
- ⚠ Type invoices one by one
- ⚠ Copy-paste bills into WhatsApp
- ⚠ Match transfers on the bank page
- ⚠ Chase the same names again

With FlexiBill

- ✓ Configure plans once
- ✓ Invoices issue on schedule
- ✓ Delivered by email or WhatsApp
- ✓ Status updates itself per bill
- ✓ Reminders fire before due dates

SCREENS THEY LIVE IN **Collection & Plan builder** · **Member Center** · **Pricing Table designer** · **Bill list & Billing Summary** · **Manage Recurring** · **PayChat dashboard · ID** · **Billing Portal config · ID**

IMPACT ON THE MERCHANT · API

API: what changes in the merchant's systems.

YOUR SYSTEM

Onboarding flow
Calls Create Subscription or Registration V2 when a customer signs up

Billing job
Calls Generate Bill with this cycle's amount for usage or ad-hoc charges

Webhook listener
Receives Activated, Renewed and Expired; updates access and the ledger

→ calls
← events

FLEXIBILL

- Bill logic and pricing
- Scheduler
- Token vault (PCI-DSS)
- Delivery: email, WhatsApp
- Status and webhooks

→

YOUR CUSTOMER

Invoice
Email or WhatsApp, with a fresh payment link

Checkout
Any enabled DOKU method

Auto-debit
Tokenised card or bank account

Receipt
Sent after every payment

Still in the dashboard
Collections, plans, coupons, tax and WhatsApp templates; cancellations; monitoring and exceptions.

Engineering checklist
Sandbox first · unique bill_identifier · total = plan × qty − coupon + tax · currency matches the business country · start date never in the past.

IMPACT ON THE MERCHANT · ORCHESTRATION

Orchestration: four layers, one bill status.

01 · DASHBOARD

Rules

Collections, plans, coupons, tax, templates and Pricing Tables

Owner: Operations

→

02 · API

Triggers

Create Subscription, Generate Bill and Registration V2 calls

Owner: Product team

→

03 · WEBHOOKS

Reactions

Renewed, Expired and reminders feed your logic: access, late fee, win-back

Owner: Backend

→

04 · PAYCHAT · PORTAL · EMAIL

Reach

Broadcast, WhatsApp sign-up, Billing Portal and branded email

Owner: Customer team

Reactions feed the next cycle's rules, so the loop closes itself: no spreadsheet sits between any two layers.

Operations

Lives in the dashboard for rules and exceptions only; the spreadsheet retires.

Product team

Owns a few calls and one webhook listener; never builds a billing engine.

Customer

Sees one consistent bill in every channel, every cycle.

ROADMAP, AVAILABLE TODAY · 1 OF 2

Pricing recipes you can run this week.

Need	Recipe with what exists today	Mode	Market
Free trial	Coupon at 100%, limited to 1 cycle, attached to the Pricing Table	No-code	ID + MY
Calendar billing (bill on the 1st)	Anchor the start date to the 1st; SPECIFIC_DATE in Generate Bill; or Account Billing calendar dates	No-code / API	ID (MY: anchor)
Proration for mid-cycle joiners	Member-specific flat coupon worth the unused days, 1 cycle; or a one-off stub bill	No-code	ID + MY
Installments	Recurring plan that ends after N bills; AFTER_X_TIMES in the API	No-code / API	ID + MY
Usage-based or postpaid	Generate Bill each cycle with the computed amount; URL Amount or flatStatus=false for auto-debit	API	ID + MY
Joining fee plus monthly fee	One-off bill beside the recurring subscription; the same customer holds both	No-code	ID + MY
Bundles and add-ons	Up to 10 plans in one subscription (same collection and cycle), or separate billing lines	No-code	ID + MY
Seats, students, share units	Per Unit with a quantity; Tiered or Volume for scale discounts	No-code	ID + MY

ROADMAP, AVAILABLE TODAY · 2 OF 2

Lifecycle and recovery recipes.

Need	Recipe with what exists today	Mode	Market
Upgrade or downgrade	End the current subscription and create the new one; a coupon covers the price difference	No-code / API	ID + MY
Pause or freeze	Inactivate the bill in Manage Recurring and reactivate later; or end and re-create with a new start date	No-code	ID + MY
Late fee or default interest	On the Payment Due Reminder or Expired webhook, Generate Bill a one-off penalty	Hybrid	ID + MY
Dunning ladder	Renewal Reminder at H-3 → Payment Due Reminder → PayChat Broadcast → grace period up to 90 days	Hybrid	ID (MY: email)
Smart retry	Multi-date retry on the 5th, 6th and 7th + Send One Bill/Month + Confirm Payment	No-code	ID + MY
Card expiry rescue	Update Source of Fund link by email, or copied into WhatsApp	No-code	ID + MY
Win-back	Expired webhook → member-specific coupon → Broadcast with the Pricing Table link	Hybrid	ID
Cohorts and early bird	Plan stock caps the seats; a coupon validity window plus stock rewards early sign-ups	No-code	ID + MY

ORCHESTRATION IN PRACTICE

Eight billing rules, one swim school.

Rule	Mechanism	Mode
Joining fee IDR 250,000	One-off bill at enrolment	No-code
Lessons IDR 450,000 on the 1st	Flat recurring plan, start date on the 1st	No-code
First month free	100% coupon, 1 cycle, on the Pricing Table	No-code
Joins mid-month	Member-specific flat coupon for the unused days	No-code
Sibling −15% on lessons only	Coupon scoped to the lessons plan	No-code
Late fee IDR 50,000 after grace	Expired webhook → Generate Bill one-off	API
Reminders parents actually read	Renewal Reminder + WhatsApp Bill Broadcast	Hybrid
Parents who never want to think	Auto-debit switched on from the invoice page	No-code

THE RESULT

8 billing rules

1 dashboard for all of them

1 webhook listener

0 spreadsheets

Illustrative scenario: Sekolah Renang Arus, Indonesia

USE CASE A · HIGH-VOLUME FIXED MONTHLY FEES

Tuition, enrichment, kindergartens and taska.

Today

- ⚠ Fees chased one parent at a time on WhatsApp
- ⚠ Receipts and sibling discounts in Excel
- ⚠ New intakes wait for an admin
- ⚠ Mid-term joiners priced by hand

No-code

- ✓ Collection per term; flat monthly plan
- ✓ Bulk upload the class list, 1,000 rows
- ✓ Pricing Table link for new intake
- ✓ Sibling coupon on tuition only

API

- ✓ School system calls Create Subscription on enrolment
- ✓ Generate Bill for trips, books and exams
- ✓ Webhooks mark fees paid in the parent app

Orchestration

- ✓ Mid-term joiners prorated by coupon
- ✓ Holiday month free: 100% coupon, 1 cycle
- ✓ Late fee after grace via webhook
- ✓ Reminders by WhatsApp (ID); auto-debit opt-in

INDONESIA STACK

Add PayChat reminders and WhatsApp sign-up, the Billing Portal in DOKU e-Wallet, VA, QRIS, e-wallets and direct debit.

MALAYSIA STACK

Email invoice with a payment link on the methods enabled for you (for example FPX, cards, e-wallets) and card auto-debit; calendar and prorate native from Q4 2026.

USE CASE A · HIGH-VOLUME FIXED MONTHLY FEES

Gyms, martial arts, dance and swim schools.

QR at the front desk → Sign up in WhatsApp (ID) → First payment → Monthly bills, automatic → Auto-debit opt-in → Card rescue by link

No-code

- ✓ Basic, Pro and Elite on a Pricing Table
- ✓ Class packs as one-off plans with an access period
- ✓ Personal training as a second billing line
- ✓ Freeze a membership by inactivating the bill

API

- ✓ Member app creates the subscription at sign-up
- ✓ Sessions or attendance billed by Generate Bill
- ✓ Webhooks open and close door access

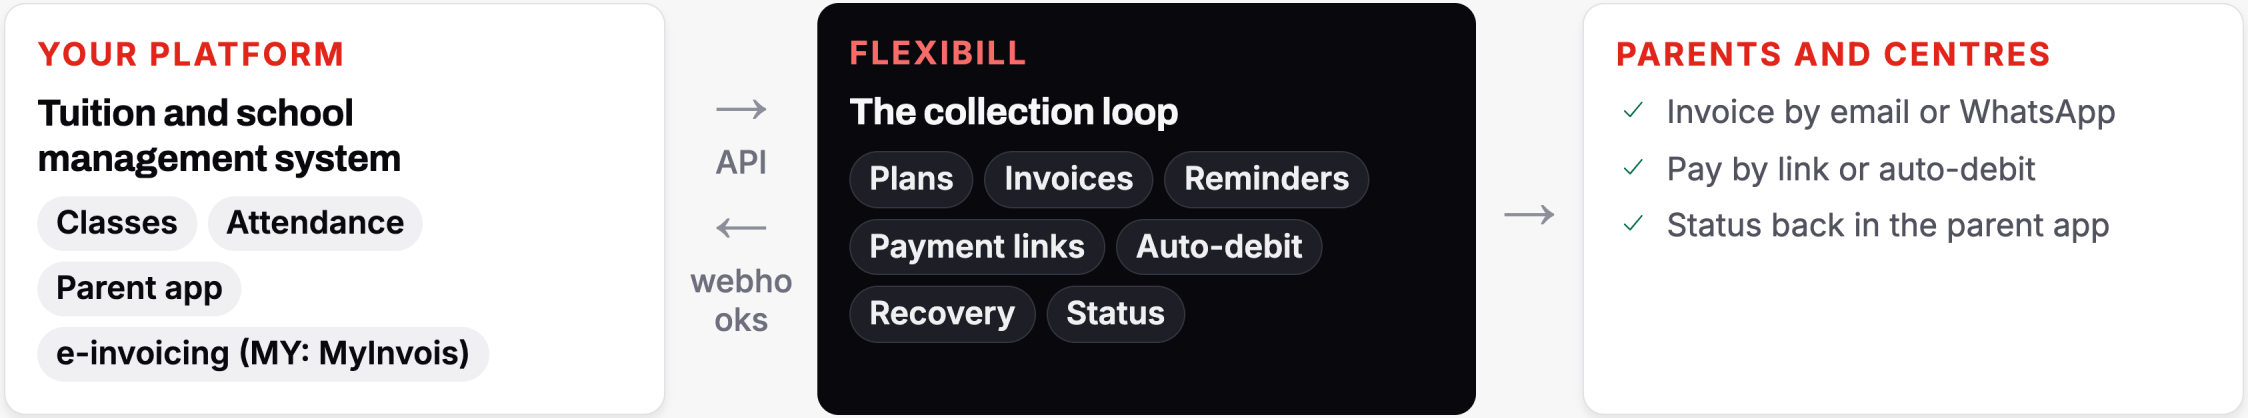

Orchestration

- ✓ First class free with a 100% coupon
- ✓ Failed card: retry dates plus update link
- ✓ Expired → win-back coupon by WhatsApp (ID)
- ✓ Corporate card for membership, personal card for extras

Malaysia: the same plays run on email, the Pricing Table and card auto-debit; WhatsApp sign-up and reminders are Indonesia only.

USE CASE B · PLATFORM-LED

School and tuition platforms: one integration, many merchants.

ID + MY

Model 1 · Embedded

Each centre is its own DOKU corporate merchant after KYB. The platform calls FlexiBill with that centre's credentials; money settles straight to the centre.

Indonesia only

Model 2 · Platform as merchant

The platform bills on behalf of centres and routes funds with Split Settlement or Sub Account. Native partner and aggregator billing is on the roadmap.

Malaysia

First targets to validate

Malaysia: AOne (4,000+ centres), Synorex, Skooly, ClassFlow, SimTrain, illumine. Indonesia: school information systems and bimbel franchise platforms.

USE CASE B · PLATFORM-LED · RECOMMENDED

The strata play for JMB and MC software.

Strata rule	FlexiBill mechanism
Charges follow share units (Strata Management Act 2013)	Per Unit plan; quantity = the parcel's share units
Sinking fund of at least 10% of maintenance	Second plan in the same subscription → one invoice
Arrears can carry default interest, commonly 10% a year	Payment Due or Expired webhook → one-off interest bill
Rates change at the AGM	Duplicate the plan at the new rate; move units in bulk
Buyers need an arrears check before a sale	Bill status per unit, live in the dashboard and API

HOW THE MONEY MOVES

1. PMS platform creates a subscription per unit
2. Owners get the invoice (email; WhatsApp in ID)
3. They pay: FPX, cards, e-wallets (MY) or VA, QRIS (ID)
4. Webhook marks the unit paid in the PMS ledger

RECOMMENDED FIRST WAVE

Malaysia: i-Neighbour (TimeTec), JaGa Solution, Gprop Systems, PROPSERVA, DigitalCondo.

Indonesian twin: IPL and sinking fund for apartment P3SRS and housing clusters.

Sources: Strata Management Act 2013 guides (superhomes.my, pepsventures.com, malaysia4u.com), vendor sites, 2025–2026

LANDSCAPE

Capability by archetype, not a ranking.

Capability	Global billing platforms	Regional PG recurring	Local vertical SaaS	FlexiBill · Indonesia	FlexiBill · Malaysia

WHAT TO LEAD WITH

The presentment-to-collection loop.

Competitors sell strong building blocks. FlexiBill closes the loop from the first “yes” to the last payment, on DOKU’s own rails.

6

presentment surfaces

Email, WhatsApp broadcast, WhatsApp sign-up, Billing Portal, Pricing Table, dashboard

2

collection behaviours

Invoice with a link, and auto-debit the customer can switch on, on one subscription

3

scheduling brains

Interval, calendar date, and a merchant-hosted clock

In Malaysia, lead with pricing depth, the coupon engine, card auto-debit controls, bulk and API. Keep WhatsApp and the portal out of the script.

THE CALL TO ACTION

Don’t sell a feature. Fix one billing journey.
